Bates, David Eddie, Paul M. Lehrer, Robert Nolan, Martin Siepmann, 2023-04-24 **The Cybernetic Brain** Andrew Pickering, 2010-04-15 Cybernetics is often thought of as a grim military or industrial science of control But as Andrew Pickering reveals in this beguiling book a much more lively and experimental strain of cybernetics can be traced from the 1940s to the present *The Cybernetic Brain* explores a largely forgotten group of British thinkers including Grey Walter Ross Ashby Gregory Bateson R D Laing Stafford Beer and Gordon Pask and their singular work in a dazzling array of fields Psychiatry engineering management politics music architecture education tantric yoga the Beats and the sixties counterculture all come into play as Pickering follows the history of

cybernetics impact on the world from contemporary robotics and complexity theory to the Chilean economy under Salvador Allende What underpins this fascinating history Pickering contends is a shared but unconventional vision of the world as ultimately unknowable a place where genuine novelty is always emerging And thus Pickering avers the history of cybernetics provides us with an imaginative model of open ended experimentation in stark opposition to the modern urge to achieve domination over nature and each other

Brain Changer David Disalvo,2013-11-19 Let s be honest You ve tried the sticky note inspirations the motivational calendar and the cute but ineffective carpe diem mug yet your attitude hasn t changed It s time to apply cutting edge science to the challenges of daily life While everyone desires self improvement we are quickly frustrated when trying to implement the contradictory philosophies of self appointed self help gurus Too often their advice is based on anecdote and personal opinion not real research Bestselling author of What Makes Your Brain Happy and Why You Should Do the Opposite David DiSalvo returns with Brain Changer How Harnessing Your Brain s Power to Adapt Can Change Your Life Drawing on the latest research in neuroscience cognitive psychology behavioral economics communications and even marketing DiSalvo replaces self help with science help He demonstrates how the brain s enormous capacity to adapt is the most crucial factor influencing how we feel and act a factor that we can control to change our lives Findings show our brains are fluid and function much like a feedback loop stimulants from both our environment and from within ourselves catalyze changes in the brain s response That response then elicits additional inputs that the brain identifies and analyzes to further tailor its response DiSalvo shows that the greatest internal tool we have to affect the feedback loop is metacognition thinking about thinking Littered with relatable examples and tackling major aspects of our lives including relationships careers physical health and personal development Brain Changer shows you how to harness metacognition to enrich your life

Adapted Brains and Imaginary Worlds Donald Beecher,2016-03-01 In Adapted Brains and Imaginary Worlds Donald Beecher explores the characteristics and idiosyncrasies of the brain as they affect the study of fiction He builds upon insights from the cognitive sciences to explain how we actualize imaginary persons read the clues to their intentional states assess their representations of selfhood and empathize with their felt experiences in imaginary environments He considers how our own faculty of memory in all its selective particularity and planned oblivion becomes an increasingly significant dimension of the critical act and how our own emotions become aggressive readers of literary experience culminating in states which define the genres of literature Beecher illustrates his points with examples from major works of the Renaissance period including Dr Faustus The Faerie Queene Measure for Measure The Yorkshire Tragedy Menaphon The Dialogue of Solomon and Marcolphus and The Moral Philosophy of Doni In this volume studies in the science of mind come into their own in explaining the architectures of the brain that shape such emergent properties as empathy suspense curiosity the formation of communities gossip rationalization confabulation and so much more that pertains to the behaviour of characters the orientation of readers and the construction of meaning Discussing a breadth of topics from the mysteries of the criminal mind

to the psychology of tears Adapted Brains and Imaginary Worlds is the most comprehensive work available on the study of fictional worlds and their relation to the constitution of the human brain

Improving outcomes in cerebral palsy with early intervention: new translational approaches Anna Purna Basu, Gavin John Clowry, 2015-03-30 The aim of this Research Topic was to collate articles describing prediction of outcomes of pre and perinatal lesions leading to cerebral palsy basic research in animal models and human subjects and ideas for and trials of interventions in the first two years of life CP arises from insults to the sensorimotor cortex subcortical axon tracts and subplate The aetiology is complex and often multifactorial The outcome is not simply a loss of voluntary control due to disruption of descending pathways but also involves abnormal development of reflex and corticospinal circuitry CP may be viewed as aberrant plasticity in response to a lesion indeed abnormalities in movement are subtle at first but develop subsequently It is misleading to suppose that developmental mechanisms are self reparative The challenge is to understand activitydependent fine tuning of neural circuitry during normal development and to find how to promote desirable plasticity whilst limiting undesirable effects following developmental lesions However before proposing interventions we have to develop our ability to predict the severity of neonatal insults We solicited a variety of articles including long and short reviews original research and opinion pieces from both basic scientists and clinicians Likewise we as editors have complementary knowledge and experience in this area Anna Basu is an academic pediatric neurologist and Gavin Clowry is a developmental neuroscientist
