Adventures in Archaeology P.J. Capelotti, 2018-09-12 Remnants of the curious and peculiar ways humankind has marked the archaeological landscape are abundant but often ignored wrecked aircraft abandoned airfields old highway billboards derelict boats movie props and deserted mining operations In this book archaeologist P J Capelotti explores places and things that people do not typically think of as archaeological sites and artifacts introducing readers to the most extreme fieldwork taking place today Capelotti shows that even seemingly ordinary objects from the recent past hold secrets about the cultural history of humans He investigates the site where a stunt copy of the Orca the fishing boat used in the movie Jaws was stripped to pieces by fans a revelation of the ways humans relate to popular culture He takes readers to abandoned base camps near the North Pole that are now used as destinations for Arctic tourism Retelling the story of Thor Heyerdahl's research expedition across the Pacific Ocean on a balsa log raft Capelotti shows how experimental archaeology attempts to reveal cultural connections between continents And he doesn't stop at the limits of the planet He discusses debris floating through outer space and equipment left behind on the surface of the moon highlighting current efforts to preserve artifacts that exist beyond the Earth's atmosphere These discarded materials says Capelotti help archaeologists piece together the sweeping story of human cultural expansion and exploitation He explains how the unusual sites of shorelines sea air and space represent the farthest reaches of human civilization His enthusiasm will inspire readers to set out on their own to investigate the secret meanings of treasures hiding in plain sight Archaeology Is a Brand! Cornelius Holtorf, 2016-07 Possessors of a widely recognized positively valued and well underpinned brand archaeologists need to take more seriously the appeal of their work and its relationship to society and popular culture **Archaeological Method and Theory** Linda Ellis, 2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials Thus the reader will find entries on subject matter covering disciplinary theory legislation affecting the work of archaeologists pre excavation surveying excavation methodology on site conservation techniques post excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources Here the latest refinements in techniques such as radiometric dating stable isotopic analysis and the PCR technique of DNA analysis are presented clearly and authoritatively The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural

sciences Cultural property legislation regardless of its country of origin has affected how archaeologists conduct their work This encyclopedia covers all major U S legislation developed for the protection of cultural property including the recent Native American Graves Protection and Repatriation Act and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology Without some sort of conservation program at the point of excavation valuable materials may be inadvertently contaminated or destroyed Many simple and low cost techniques to promote both sample integrity and long term preservation for major classes of materials are described in this volume Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology Industrial Archaeology Medieval Archaeology and Classical Archaeology

Brian Fagan, Nadia Durrani, 2023-06-21

People of the Earth is a narrative account of the prehistory of humankind from our origins over 6 million years ago to the first pre-industrial states beginning about 5,000 years ago. This is a global prehistory which covers prehistoric times in every corner of the world in a jargon-free style for newcomers to archaeology. Many world histories begin with the first pre-industrial states. This book starts at the beginning of human history and summarizes the latest research into such major topics as human origins, the emergence and spread of modern humans, the first farming, and the origins of civilization. *People of the Earth* is unique in its even balance of the human past, its readily accessible style, and its flowing narrative that carries the reader through the long sweep of our past. The book is highly illustrated and features boxes and sidebars describing key dating methods and important archaeological sites. This classic world prehistory sets the standard for books on the subject and is the most widely used such textbook in the world. It is aimed at introductory students in archaeology and anthropology taking survey courses on the prehistoric past as well as more advanced readers. It will also appeal to students of human responses to climatic and environmental change.

The Presented Past B. L. Molyneaux,P. G. Stone,2003-09-02 The Presented Past is concerned with the differences between the comparatively static well understood way in which the past is presented in schools museums and at historic sites compared to the approaches currently being explored in contemporary archaeology It challenges the all too frequent representation of the past as something finished understood and objective rather than something that is constructed and therefore open to co

existing interpretations and constant re interpretation Central to the book is the belief that the presentation of the past in school curricula and in museum and site interpretations will benefit from a greater use of non documentary sources derived from archaeological study and oral histories The book suggests that a view of the past incorporating a larger body of evidence and a wider variety of understanding will help to invigorate the way history is taught The Presented Past will be of interest to teachers archaeologists cultural resource managers in fact anyone who is concerned with how the past is presented
