The Aging Body Physiological Changes And Psychological Consequences:

The Aging Body Susan Krauss Whitbourne, 2012-12-06 The objective of this book is to provide information that will be useful to people in a variety of disciplines who wish to learn more about normal aging processes in the human body Although gerontologists in the biological sciences are making great strides in research on human aging and documenting this work in monographs texts and review chapters this information is generally not easily accessible nor is it comprehensible to nonprofessionals in these fields This book is intended to provide a summary of this work along with its implications for psychological functioning of the aging individual The majority of the book is devoted to describing the results of research on the physiological changes in the human body with aging and to seeking explanations for these age effects This description has been approached in such a way as to make it readable for the nonspecialist but also to focus on research issues that will be useful reading for those who are currently working in these particular areas In addition throughout the book I have tried to develop some themes regarding physiological and psychological adaptation during adulthood Formal Linguistics and Law

Günther Grewendorf, Monika Rathert, 2009-12-15 This volume explores new interfaces between linguistics and jurisprudence Its theoretical and methodological importance lies in showing that many questions asked within the field of language and law receive satisfactory answers from formal linguistics The book starts with a paper by the two editors in which they explain why the volume as a whole and with its individual papers is an innovation in the field of language and law In addition an overview about the most important research projects on language and law is given The first chapter of the book is on understanding the law Jurists and laypersons always ask for the precise meaning of a certain piece of the law In linguistics the discipline investigating meaning is semantics thus it is to be expected that semantics can contribute to a correct understanding of the law Chapter 1 also investigates the alleged incomprehensibility of legal language with the help of psycholinguistics Chapter 2 is on identifying the criminal To find the author of a blackmailer's letter text corpus linguistics is instrumental If the blackmailer uses the telephone instead of the letter speaker identification and phonetics are necessary The BKA stores all blackmailing letters in a database but databases are only one possibility of organizing legal systems another possibility is the application of tools from computational linguistics and artificial intelligence These tools can be useful to handle terminology to retrieve information or to model legal theorizing in a formal system Chapter 3 demonstrates a variety of examples of organizing legal systems The topic of chapter 4 is multilingualism and the law The European legislation is a product of legal and linguistic diversity as the member states do not only differ in languages but also in their legal systems One paper shows how Switzerland handles its multilingualism in legal drafting The input of translation studies is of course vital in this field of research An index for both subjects and persons complements the volume **Psychological**

Treatment of Older Adults Michel Hersen, Vincent B. Van Hasselt, 2013-06-29 This multiauthored introductory textbook could not have been conceived or brought to fruition 10 or 15 years ago Indeed at that time relatively little attention was

accorded to the psychological needs of older adults The general tenor of the field then was that older adults would not benefit from psychological intervention As we now know this was a faulty assumption that has been discredited with empirical data Indeed clinical research data adduced primarily in the last decade clearly documents that older adults do benefit from specific psychotherapies that are tailored to their unique presentation of symptoms Given the explosion of interest in this area as evinced by increased investigatory activity national funding and media attention and the increased number of masters and doctoral level courses devoted to this topic we felt that the time was right for a textbook in the area Such flurry of activity also has been fueled by statistics showing how our population by the year 2030 will consist of 30% who are senior citizens Moreover since 12% of older adults in the community are estimated to have diagnosable psychiatric disorders and 40% to 50% of older adult medical inpatients have a concomitant psychiatric disorder the task for clinicians in the next century will be overwhelming Annual Review of Gerontology and Geriatrics, Volume 7, 1987 K. Warner Schaie, PhD, 1987-11-15 This volume of the ARGG is devoted to the behavioral sciences with particular attention given to topics in experimental and applied psychology With the rapid rate of research in this field of aging the contributors address a number of important basic and applied topics that are underrepresented in other literature **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), **Handbook of Clinical Behavior Therapy with the Elderly Client** Patricia A. Wisocki, 2013-11-21 Although we speak of the elderly as if there were one body of people with common characteristics older adults are more heterogeneous than any other population People over the age of 65 are also the fastest growing segment of the population in the United States currently numbering 25 million The majority of older adults reside in their communities a small fraction of them are cared for in institutions Most may expect to experience some kind of physical impairment Approximately a quarter of the population may expect to suffer a mental health impairment While traditional therapies have not been especially effective for older adults behavior therapy has shown exceptional promise as a treatment modality This book presents a comprehensive explication of the relatively new field of behavioral gerontology It was written for the clinician interested in the interaction of medical environmental and psychological variables and their effects on treatment of elderly clients and for the researcher who will be looking to extend knowledge about interventions with this population It will be useful for the graduate student in clinical psychology as well as the experienced clinician who will want to include the elderly in his or her therapeutic population Encyclopedia of Aging and Public Health Sana Loue, Martha Sajatovic, 2008-01-16 Americans are living longer and the elder population is growing larger To meet the ongoing need for quality information on elder health the Encyclopedia of Aging and Public Health combines multiple perspectives to offer readers a more accurate and complete picture of the aging process The book takes a biopsychosocial approach to the complexities of its subject In depth introductory chapters include coverage on a historical and demographic overview of aging in America a guide to biological changes accompanying aging an analysis of the diversity of the U S elder population

legal issues commonly affecting older adults and the ethics of using cognitively impaired elders in research From there over 425 entries cover the gamut of topics trends diseases and phenomena Specific populations including ethnic minorities custodial grandparents and centenarians Core medical conditions associated with aging from cardiac and pulmonary diseases to Parkinson s and Alzheimer s Mental and emotional disorders Drugs vitamins alternative medicine Disorders of the eyes feet and skin Insomnia and sleep disorders malnutrition and eating disorders Sexual and gender related concerns And a broad array of social and political issues including access to care abuse neglect veterans affairs and assisted suicide Entries on not quite elders concerns e g midlife crisis menopause are featured as well And all chapters and entries include references and resource lists The Encyclopedia has been developed for maximum utility to clinicians social workers researchers and public health professionals working with older adults Its multidisciplinary coverage and scope of topics make this volume an invaluable reference for academic and public libraries

Human Body Composition Gilbert B. Forbes, 2012-12-06 Man has always been curious about himself a curiosity that began centuries ago with an examination of the soul and that extended in the period of the Renaissance to his anatomy and certain functions such as the circulation of the blood Chemical science entered the scene in the 18th century and burst into prominence in the 19th century As the various chemical elements were discovered many were found to be present in body fluids and tissues Organic compounds were recognized it became known that body heat was produced by the combustion of food chemical transformations such as the production of fat from carbohydrate were recognized and in the 1850s it was determined that young animals differed from adults in certain aspects of body composition As methods for chemical analysis evolved they were applied to samples of body fluids and tissues and it became apparent that life depended on chemical normality and most importantly it was realized that given the necessary amount of food and water the body had the ability to maintain a degree of constancy of what Claude Bernard called the milieu interieur in other words its interior chemical environment Adult Development and Aging Bert Hayslip, Paul E. Panek, Julie Hicks-Patrick, 2007 Presents a view of the adult years that is topical in nature rather than chronological given the tremendous variability among adults and older persons This book includes chapters that are arranged to first lay the groundwork for thinking about adult development and then deal with basic psychobiological processes **Current Catalog** National Library of Medicine (U.S.), 1985 First multi year cumulation covers six years 1965 70
