### **Assembly of the Photosystem II Membrane-Protein Complex of Oxygenic Photosynthesis** Julian J.

Eaton-Rye, Roman Sobotka, 2017-08-08 Photosystem II is a 700 kDa membrane protein super complex responsible for the light driven splitting of water in oxygenic photosynthesis The photosystem is comprised of two 350 kDa complexes each made of 20 different polypeptides and over 80 co factors While there have been major advances in understanding the mature structure of this photosystem many key protein factors involved in the assembly of the complex do not appear in the holoenzyme The mechanism for assembling this super complex is a very active area of research with newly discovered assembly factors and subcomplexes requiring characterization Additionally the ability to split water is inseparable from light induced photodamage that arises from radicals and reactive O<sub>2</sub> species generated by Photosystem II chemistry Consequently to sustain water splitting a self repair cycle has evolved whereby damaged protein is removed and replaced so as to extend the working life of the complex Understanding how the biogenesis and repair processes are coordinated is among several important questions that remain to be answered Other questions include how and when are the inorganic cofactors inserted during the assembly and repair processes and how are the subcomplexes protected from photodamage during assembly Evidence has also been obtained for Photosystem II biogenesis centers in cyanobacteria but do these also exist in plants Do the molecular mechanisms associated with Photosystem II assembly shed fresh light on the assembly of other major energy transducing complexes such as Photosystem I or the cytochrome b<sub>6</sub> f complex or indeed other respiratory complexes The contributions to this Frontiers in Plant Science Research Topic are likely to reveal new details applicable to the assembly of a range of membrane protein complexes including aspects of self assembly and solar energy conversion that may be applied to artificial photosynthetic systems In addition a deeper understanding of Photosystem II assembly particularly in response to changing environmental conditions will provide new knowledge underpinning photosynthetic yields which may contribute to improved food production and long term food security

Separations Using Aqueous Phase Systems D. Fisher, 2012-12-06 The use of aqueous two phase systems for the partitioning of macromolecules organelles and cells was originally developed by Per Ake Albertsson in Sweden in the mid fifties 1 3 These systems were initially applied to separations of plant organelles and viruses but their use has now extended into most areas of cell biology and biochemistry 4 5 Since 1979 biennial International Conferences on Partitioning in Aqueous Two Phase Systems have been held in Los Angeles 1979 Sheffield 1981 Vancouver 1983 and Lund 1985 The 5th conference was held in Oxford from 23 28 August 1987 and was entitled Advances in Separations Using Aqueous Phase Systems in Cell Biology and Biotechnology It is the formal presentations from this meeting

which comprise this volume In contrast to earlier books on phase partitioning 4 5 this volume contains for the first time worldwide contributions from over sixty partitioners from a variety of scientific disciplines thereby providing a detailed overview of the widespread application and potential of bioseparations using phase partitioning Disciplines include Biophysics Biochemistry Cell Biology Microbiology Biotechnology and Process Engineering in both academic and commercial establishments These biennial conferences allow advances in these diverse partitioning fields to be reviewed and compared they also provide an opportunity for those considering using phase partitioning to obtain information advice and contacts Attendance has grown steadily over the years and 140 scientists came to Oxford The conference consisted of ten symposia on areas of application of partitioning which have been organised as specific chapters in this volume     *Signals & Systems*
