Forbes ASAP. ,2000 **Coexisting problems for wireless sensor networks working in 2.4 GHz frequency band** Vikram Kulkarni,2019-12-03 Document from the year 2019 in the subject Computer Science Internet New Technologies course Wireless Sensor Networks Home Area Networks language English abstract The objectives of this research are To propose a scheme to estimate the future interference and enable efficient channel switching mechanism to avoid interference for Wireless Sensor Network WSN as per the latency requirements specified by Smart Grid SG To propose an algorithm for efficient data recovery mechanism so that ZigBee devices can quickly familiarize with the encoding according to the highly dynamic WiFi traffic To propose an efficient frequency shifting mechanism for different frame sizes of data under interference conditions to guarantee the reliable data transmission within the delay requirements of the SG To propose an effective mechanism to guarantee the ZigBee communications within the maximum tolerable delay under the coexistence of WiFi for carrying out effective smart home solutions To propose an algorithm based on effective transmission power control to increase WSN life time under coexistence scenarios for efficient monitoring and controlling purposes at smart homes With the introduction of Information and Data Communication Technology ICT to the present electrical power systems the traditional electrical grid system is becoming more intelligent and adaptive The ICT successfully establishes bi directional communication between Utility companies and the consumer for improving the generation and utilization of power Wireless Sensor Network WSN is efficiently utilized by wide ranging Smart Grid SG applications Despite many advantages WSN faces a challenge of avoiding interference experiencing from other coexisting wireless technologies working in the 2.4GHz unlicensed frequency band Providing support for WSN in terms of avoiding interference is a very challenging issue due to the dynamic wireless communication environment and extremely limited resources In the present thesis the problem of interference experienced by WSN in 2.4GHz has been investigated The challenges limitations and requirements for avoiding the interference for WSN working in the vicinity of other technologies like WiFi and Bluetooth have been identified As a result of the literature survey carried out it was identified that proper channel selection and channel prioritization for WSNs

working in the coexisting environment had not been adequately developed till then Hence there was a requirement for addressing these issues The proposed schemes in this thesis are based on simulation results obtained *ISpy* Mark Andrejevic,2007 A chilling account of the tradeoff we are willing to make between interactive media technologies and the power of others to watch over and control us This brave new world of electronic marketing and consumption actually lulls consumers into blissful ignorance of how that usage can be and is being monitored **Web-Based Network Management** Curt Harler,1999-04-30 Acquaints you with the most recent wave of browser free Web based network management products A hands on guide for planning anywhere anytime network access and management Page 4 of cover
