is the most used man made material in the world and is the fundamental physical medium for most of the world's architecture and construction. The character of concrete is largely the product of the rigid moulds that have shaped it since its invention in antiquity. The advent of flexible moulds however marks a radical break from conventional practice and conventional concrete architecture. The Fabric Formwork Book provides the first comprehensive handbook on the emerging technology of flexible moulds for reinforced concrete architecture. Written by the foremost expert in the field, this book takes a comprehensive and generous approach that includes technical, historical and theoretical aspects of the subject. The book concentrates on simple flat sheet formworks, contains detailed technical descriptions of how to construct a wide range of formworks for various applications, features case studies from around the world, critiques the difficulties and advantages in each case, it covers, provides instruction and guidance on how to model and design fabric formed structures, includes the most comprehensive history of fabric formwork yet published, features essays from guest expert authors which explore the theoretical, historical and poetic significance of flexibly formed architecture and structures, discusses fabric formwork as an exemplary approach to sustainable construction through its simplicity and efficiency. Beautifully designed and illustrated with a superb range of images, diagrams and technical drawings, the book both informs and inspires.
