Robert R. Redfield

That Second Bottle:

That Second Bottle Nicholas Fisher, 2000-12-15 This book focuses on the historical and current place of religion in the Irish education system from the perspective of children's rights and citizenship. It offers a critical analysis of the political, cultural, and social forces that have shaped the system, looking at how the denominational model has been adapted to increased religious and cultural diversity in Irish society and showing that recent changes have failed to address persistent discrimination and the absence of respect for freedom of conscience. It relates current debates on the denominational system and the role of the State in education to competing narratives of national identity that reflect nationalist, communitarian, or republican political outlooks. This book will be essential reading for students and researchers in the fields of education policy and Church-State relations in Ireland and will also engage non-academic audiences with an interest or involvement in Irish education.

The iconoclastic host of the PBS show *Enjoying Wine* with Mark Phillips has been turning the wine world on its ear since it first aired. In his 2009 wave maker *Swallow This*, Mark stirred things up even more to the delight of consumers. Now comes the second edition, and it's a doozy. Among its new material are topics such as how to fix wine if you don't like it, wine selection and pricing ratings for major retail chains, additional food and wine pairing guidelines, how global warming is significantly changing wine-growing regions, and a list of restaurants with the best deals on wine in the major metros of every state. Mark offers a whole new approach to wine which flies in the face of what has been traditionally taught and serves as a practical and empowering alternative. Witty, unique, and never boring, *Swallow This* will change the way you think about wine.

PROGRAMMABLE LOGIC CONTROLLER PEng. Emmanuel Pregrino Mgisha, 2024-05-05 The programmable logic controller represents a key factor in industrial automation because before programmable logic controllers, manufacturing plants employed relay-based circuitry to energise different loads based on how the relays were wired together. The circuit patterns used for these drawings are known as ladder diagrams. Relays were costly, required constant maintenance, and could not be easily reconfigured. As PLCs took over this process, it was essential to maintain a similarity to the old system; thus, ladder logic was created as the first PLC programming language. Ladder logic is one of the top 5 most popular types of PLC programming languages used in various module syllabuses in various fields of Engineering courses, including Electrical, Electronics, Telecommunications, Mechanical, Mechatronics, Electromechanical, Oil and Gas, Ship
