The Acoustics Of The Recorder:

The Acoustics of the Recorder John Martin, 1994 **The Recorder** Richard W. Griscom, David Lasocki, 2013-06-17 A Choice Best Academic book in its first edition The Recorder remains an essential resource for anyone who wants to know about this instrument This new edition is thoroughly redone takes account of the publishing activity of the years since its first publication and still follows the original organization The Acoustics of Crime Harry Hollien, 2013-06-29 There are many reasons for writing a book this one was conceived and developed mainly for two First a new area has emerged from within the forensic sciences that of forensic phonetics As with all new specialties it is necessary to define it identify its boundaries justify its importance and compile a list of the elements it encompasses This book attempts to outline these several relationships Second over the past decade I have become fascinated with forensics in general and the rapidly expanded subarea of forensic phonetics in particular Admittedly the latter field is one that is not as yet sufficiently appreciated and much more needs to be known about its nature and extent Yet I have found it to be a most enjoyable area of study and my attempts to describe its domains were quite informative It was especially interesting to struggle with the interfaces between forensic phonetics and related fields and discover how they overlap Only a few comments will be made about the book's contents here in the preface For one thing they are described in some detail in the first chapter **The Sound Handbook** Tim Crook, 2013-06-17 Tim Crook has written an important and much needed book and its arrival on our shelves has come at a highly appropriate time Professor Sen Street Bournemouth University The Sound Handbook maps theoretical and practical connections between the creation and study of sound across the multi media spectrum of film radio music sound art websites animation and computer games entertainment and stage theatre Using an interdisciplinary approach Tim Crook explores the technologies philosophies and cultural issues involved in making and experiencing sound investigating soundscape debates and providing both intellectual and creative production information The book covers the history theory and practice of sound and includes practical production projects and a glossary of key terms The Sound Handbook is supported by a companion website signposted throughout the book with further practical and theoretical resources dedicated to bridging the creation and study of sound across professional platforms and academic disciplines A History of the Acoustics Division of the Naval Research Laboratory Fred Tudor Erskine, 2013 **Handbook of Materials for Wind Musical Instruments** Voichita Bucur, 2019-09-06 This book addresses key questions about the materials used for the wind instruments of classical symphony orchestra such as flutes clarinets saxophones oboes bassoons and pipe organs The content of this book is structured into four parts Part 1 Description of materials for wind instruments deals with wood species and materials for reeds used for making clarinet oboe and bassoon and with metallic materials and alloys for horn trumpet trombone etc Auxiliary materials associated with the manufacturing of wind instruments are felt cork leather and parchment Part 2 Basic acoustics of wind instruments in which are presented succinctly some pertinent aspects related to the physics of the resonant

air column An important aspect discussed is related to the effect of wall material on the vibration modes of the walls of wind instruments The methods for measuring the acoustical properties of wind instruments are presented Part 3 Manufacturing of wind instruments describes the technology used in manufacturing metallic tubes and pipes made of wood Part 4 The durability and degradation of materials addresses data about methods for cleaning wind instruments studies factors producing degradation of organ pipes describes methods of conservation and restoration of brass instruments and of historical pipe organs Finally the properties of marble are described being the only one nondegradable and sustainable material used for pipes for organs

Akal,J.M.

Berkson,2013-03-09 Seafloor investigation has long been a feature of not only seismology but also of acoustics Indeed it was acoustics that produced depth sounders giving us the first capability of producing both global and local maps of the seafloor Subsequently better instrumentation and techniques led to a clearer more quantitative picture of the seabed itself which stimulated new hypotheses such as seafloor spreading through the availability of more reliable data on sediment thickness

over ocean basins and other bottom features Geologists and geophysicists have used both acoustic and seismic methods to study the seabed by considering the propagation of signals arising from both natural seismic events and man made impulsive sources Although significant advances have been made in instrumentation such as long towed geophysical arrays air guns and ocean bottom seismometers the picture of the seafloor is still far from complete Underwater acoustics concerns itself today with the phenomena of propagation and noise at frequencies and ranges that require an understanding of acoustic interaction at both of its boundaries the sea surface and seafloor over depths ranging from tens to thousands of meters Much of the earlier higher frequency 1 kHz work included the characterization of the seafloor in regimes of reflection coefficients which were empirically derived from surveys The results of these studies met with only limited success confined as they were to those areas where survey data existed and lacking a physical understanding of the processes of reflection and scattering

Underwater N&V Pollution Davide Borelli, Tomaso Gaggero, 2019-01-11 Noise and vibrations generated by ships affect a wide range of receivers crew and passengers inside the vessel inhabitants of the coastal areas and marine fauna outside it Recent studies suggest that a large percentage of people living in urban areas close to harbors and a number of marine species at different evolutionary levels in particular mammals and cephalopods suffer from ship N V emissions in air and in water The present degree of knowledge of the phenomena involved in the noise emissions inside and outside ships is quite different as a result also of the time elapsed since the negative effects were realized and therefore studied The development of the normative framework in the various areas reflects these differences but there are expectations for improvements on all fronts that need to be supported by the scientific community presenting the latest research results in this particular field of
