Matson, Noha F. Minshawi, 2006-04-12 Early Intervention for Autism Spectrum Disorders is the first in a series aimed at addressing the rapidly expanding field of assessment and treatment of children with mental health issues and or development disabilities Early Intervention for Autism Spectrum Disorders is aimed at the researcher of practitioner who works with those young children with Autism Spectrum Disorder In addition to covering major research developments in differential diagnosis and early intervention the author s provide a critical review and analysis of core concept that define this area The first chapter of the book reviews the development of definitions of autism along with early methods for diagnosing this area of developmental disabilities Chapter

two covers some of the most discussed theories of etiology along with a review of prevalence and the author's opinions on why the number of children diagnosed with autism spectrum disorder has increased markedly in recent years. A chapter on the most commonly used assessment methods and a critique of the psychometric properties of each is followed by three chapters on treatment. We have broken the treatment chapters down based on type of intervention. The first treatment chapter covers specific target behaviors or small sets of behaviors. A second chapter covers training for the packaged comprehensive treatment models with particular emphasis on the TEACCH, UCLA YAP, and the University of California Santa Barbara Autism Research and Training Program. Each of these programs gives a unique perspective on treatment for these young children. The final treatment chapter covers the recent developments in pharmacotherapy for autism spectrum disorder with a critical analysis and review of the data. We hope the overview presented proves to be of interest to researchers and practitioners in the field. We present one perspective on this exciting and innovative area of research and treatment. Hopefully it will serve as one useful source to those who wish to provide the most up-to-date evidence-based intervention to these young developmentally challenged children. The first of a new series that is intended to expand knowledge of the assessment and treatment of children with developmental disabilities and/or mental health issues. Provides definitions, addresses diagnosis, intervention, and treatments. Of particular importance to researchers and practitioners who work with children who have been diagnosed with Autism Spectrum Disorder. Best Practices in School Neuropsychology Daniel C. Interventions for Mental and Substance Use Disorders Institute of Medicine, Board on Health Sciences

Policy, Committee on Developing Evidence-Based Standards for Psychosocial Interventions for Mental Disorders, 2015-09-18

Mental health and substance use disorders affect approximately 20 percent of Americans and are associated with significant morbidity and mortality Although a wide range of evidence based psychosocial interventions are currently in use most consumers of mental health care find it difficult to know whether they are receiving high quality care Although the current evidence base for the effects of psychosocial interventions is sizable subsequent steps in the process of bringing a psychosocial intervention into routine clinical care are less well defined Psychosocial Interventions for Mental and Substance Use Disorders details the reasons for the gap between what is known to be effective and current practice and offers recommendations for how best to address this gap by applying a framework that can be used to establish standards for psychosocial interventions The framework described in Psychosocial Interventions for Mental and Substance Use Disorders can be used to chart a path toward the ultimate goal of improving the outcomes The framework highlights the need to 1 support research to strengthen the evidence base on the efficacy and effectiveness of psychosocial interventions 2 based on this evidence identify the key elements that drive an intervention s effect 3 conduct systematic reviews to inform clinical guidelines that incorporate these key elements 4 using the findings of these systematic reviews develop quality measures measures of the structure process and outcomes of interventions and 5 establish methods for successfully implementing and sustaining these interventions in regular practice including the training of providers of these interventions The recommendations offered in this report are intended to assist policy makers health care organizations and payers that are organizing and overseeing the provision of care for mental health and substance use disorders while navigating a new health

care landscape The recommendations also target providers professional societies funding agencies consumers and researchers all of whom have a stake in ensuring that evidence based high quality care is provided to individuals receiving mental health and substance use services
