**Revolutionary Experiments** Nikolai Kremmentsov, 2014 Kremmentsov examines a particular fascination with the dream of immortality and the place of science and fiction in its pursuit in Russia during roughly a decade that followed the country's political revolutions of 1917. It argues that contemporary scientific experiments aimed at the control over life, death, and disease inspired many Russian writers to conduct their own literary experiments with the ideas and techniques offered by experimental biology and medicine, which found expression in both popular science writings and a new literary genre, science fiction.

**The Reception of James Joyce in Europe** Geert Lernout, Wim Van Mierlo, 2009-07-22 A major scholarly collection of international research on the reception of James Joyce in Europe.

**Library Work**, 1909 *Experiments in Life-Writing* Lucia Boldrini, Julia Novak, 2017-10-24 This volume examines innovative intersections of life writing and experimental fiction in the 20th and 21st centuries, bringing together scholars and practicing biographers from several disciplines: Modern Languages, English, and Comparative Literature, Creative Writing. It covers a broad range of biographical, autobiographical, and hybrid practices in a variety of national literatures, among them many recent works, texts that test the ground between fact and fiction that are marked by impressionist, self-reflexive, and intermedial methods by their recourse to myth, folklore, poetry, or drama as they tell a historical character's story. Between them, the essays shed light on the broad range of auto-biographical experimentation in modern Europe and will appeal to readers with an interest in the history and politics of form in life writing, in the ways in which departures from traditional generic paradigms are intricately linked with specific views of subjectivity with questions of personal, communal, and national identity. **Literature and Science as Modes of Expression** F.R. Amrine, 2012-12-06 On the 25th anniversary of the founding of the Boston Studies series in 1985, Cohen, Elkana, and Wartofsky wrote in another preface such as this: that the time had come for establishing institutions supporting a vision to which the series had been devoted since its inception, namely that of a more broadly conceived interdisciplinary study of the history and philosophy of science. In recent years, it has become evident that in addition to serious and competent disciplinary work on the specifics of the History of Science, the Philosophy of Science, and the Sociology of Science, there is now a growing need to develop a problem-oriented approach which no longer distinguishes between these three specialties in a cut-and-dried way. Since the time has come for such an approach, the institutional tools should be provided. A way to do so would be to organize colloquia and to publish good papers stemming from these without attempting to organize the papers under the separate rubrics of History of Philosophy or Sociology of Science, and moreover to consider it natural that any fundamental issue of the foundations of the sciences or their place in a culture and the way they are institutionalized in the societal web is still our concern, no matter whether we are a professional scientist, historian, or philosopher who deals with the problem. p. vii

*Realism: Aesthetics, Experiments, Politics* Jens Elze, 2022-04-07 Realism seems to be everywhere both as a trending critical term and as a revitalized aesthetic practice This volume brings together for the first time three aspects that are pertinent for a proper understanding of realism its 19th century aesthetics committed to making reality into an object of serious art the experiments with and against realism by 20th century modernist postmodernist or magical realist writing and the politics of realism especially its ambitions to map the complex realities produced by global capitalism and climate catastrophe This juxtaposition of aesthetics experiments and politics unsettles the entrenched opposition between realism and experimental literature that tends to ignore the fact that realism by virtue of its commitment to a changing material and social world cannot be but continuously experimenting The innovative chapters of this book address some of the pressing questions of literary and cultural studies today like the complex relation between historical materialism and new materialisms between science and art or the different aesthetic and political affordances of making systemic analyses against depicting the specificity of the local Some of the chapters deal with classically realist authors such as George Eliot mile Zola and Joseph Conrad to gauge the aesthetic radicalism of their diverse realist projects Others investigate the experimental engagements with realism by authors such as B S Johnson J M Coetzee or Rachel Cusk Yet others analyze the politics of realism found in contemporary anglophone novels by writers like Chimamanda Ngozi Adichie David Mitchell or Rohinton Mistry The readings assembled here are a testament to the diversity of literary realism s from the 19th 20th and 21st centuries and to the ongoing controversies surrounding definitions and deployments of realism

*Diseases and Disorders in Contemporary Fiction* James Peacock, Tim Lustig, 2013-04-17 The essays in this collection address the current preoccupation with neurological conditions and disorders in contemporary literature by British and American writers The book places these fictional treatments within a broader cultural and historical context exploring such topics as the two cultures debate the neurological turn postmodernism and the post postmodern and responses to September 11th Considering a variety of materials including mainstream literary fiction the graphic novel popular fiction autobiographical writing film and television contributors consider the contemporary dimensions of the interface between the sciences and humanities developing the debate about the post postmodern as a new humanism or a return to realism and investigating questions of form and genre and of literary continuities and discontinuities Further the essays discuss contemporary writers attempts to engage the relation between the individual and the social looking at the relation between the syndrome syndrome referring to the prevalence in contemporary literature of neurological phenomena evident at the biological level and existing work in the field of trauma studies where explanations tend to have taken a psychoanalytical form allowing for perspectives that question some of the assumptions that have marked both these fields The current literary preoccupation with neurological conditions presents us with a new and distinctive form of trauma literature one concerned less with psychoanalysis than with the physical and evolutionary status of human beings

**Collection of Miscellaneous Articles on the Intersection of Posthumanism, Transhumanism, Anthropocene, and Post-Anthropocentrism in Some Select, Contemporary Novels** Dr. Indrajit Patra,2021-06-14 The book intends to present a critique of some select 21st Century hard science fiction novels in order to explicate the various ways in which the elements of posthumanism transhumanism techno singularity intersect and interact with other such ideas as monstrosity animality machinicity post anthropocentrism and Anthropocene The study divides its analysis into seven different chapters and attempts to present an elaborate study on various aspects of posthumanism transhumanism and singularity The book

despite being a collection of miscellaneous essays actually intends to show how a technologically mediated transhuman posthuman culture will normally be defined by a total dissolution of binaries such as digital and real animal and human and machine and man The book also wants to describe through its analysis of some select hard science fiction novels that man machine merger and creation of hyper immersive virtual reality can function as two of the most effective agents for catalyzing a radically transformative posthuman post scarcity and techno utopian culture The analysis presented in the book is not totally oriented to the discussion of far future implications of accelerated technological progress which is imperative for arriving at a transhuman or posthuman stage rather the book is equally concerned with the implications of rapid technological advancements in our present times and so the study also posits that before ascending to the heights of posthuman status mankind has to cope with the good and bad aspects of the Anthropocene which is the next stage in our collective evolution and journey towards the trans posthuman state The first chapter of this study attempts to bring to focus the phenomenon of a technologically mediated dissolution of the binaries between man animal human nonhuman and subject object which will be extremely important in the analysis of the emergence of a posthuman culture later in the study Technological advancements can be seen here as either conducive towards creating a harmonious relationship between man and animal or through systematic denigration of the agency of the animal it can pave the way for the emergence of monstrosity In Chapter 2 of the book we shall delve deep into the analysis of horror as illustrated in the novels and video games of the Dead Space series Here through a multi theoretical perspective we shall find how horrors and monstrosity can manifest themselves in both written as well as digital virtual media In Chapter 3 we shall delve into the discussion of the power of simulation in the construction of an immersive and hyperreal post transhuman culture where the distinction between real and virtual and material and immaterial vanishes altogether In Chapter 4 we dedicate the entire chapter to the study of Kim Stanley Robinson s systems novel The Ministry for the Future 2020 to attempt a critique of the elements of good and bad Anthropocene Though not directly and intimately related to the study of posthumanism and transhumanism yet a discussion of the elements of the Anthropocene will be of immense contemporary relevance to us The next Chapter i e Chapter 5 will attempt to present an explication of the role of machines in the realization of posthuman culture Chapter 6 is primarily concerned with an analysis of Stephen Baxter s novels to see how posthuman culture is constructed around the agency of the autopoietic machines The final chapter attempts to present a brief analysis of three of Iain M Banks Culture novels namely Matter Surface Detail and Hydrogen Sonata to elaborate on the employment of posthuman transhuman tropes in these works

 construction of history as a social common denominator is a powerful achievement of the nineteenth century novel a form  
 dedicated to experimenting with democratic social practice as it conflicts with economic and feudal visions of social order  
 Through revisionary readings of familiar nineteenth century texts The English Novel in History 1840-1895 takes a  
 multidisciplinary approach to literary history It highlights how narrative shifts from one construction of time to another and  
 reformulates fundamental ideas of identity nature and society Elizabeth Ermarth discusses the range of novels alongside  
 other cultural material including painting science religious political and economic theory She explores the problems of how a  
 society as defined in democratic terms can accommodate political gender and class differences without resorting to hierarchy  
 and how narrowly conceived economic agendas compete with social cohesion Students advanced undergraduates  
 postgraduates and specialists will find this text invaluable *The Complete Works of Mark Twain: Novels, Short Stories,

**Understanding Nature** Hub Zwart, 2008-01-29 This summons clearly resonates with the archetypal image associated with water as a basic element discussed in Chapter 2 water as the element of freedom of mobility of widening one's horizon Although Nietzsche himself refrained from doing what he summoned others to do scientists like Darwin and novelists like Melville actually went to sea Darwin although regarded by Nietzsche as an arid and mediocre mind exposed himself to the experience of a long term trans oceanic voyage in the course of which he did discover new worlds new justifications new moral watchwords even struggle for life that were to have a tremendous impact on science philosophy and even culture at large Other perspectives are present in Moby Dick as well such as the theologian's one depicting the whale as the biblical Leviathan and the ocean as that part of the world where the great flood never abated Indeed the interpretation of marine phenomena in Biblical terms is more or less omnipresent in the novel and also resounds in the views and language of the philosophical sailor and story teller Ishmael But what about the novelist's whale Actually there is not one novelist's whale Ishmael the narrator unmistakably sides with the whaler's point of view but Melville the author is interested in and tries to do justice to a plurality of voices
