The Altruist:

The Altruist Aryn B. Sune, 2011-01-29 *The Altruist* Joseph F. Stanley, 1920 The Altruist in Politics Benjamin N. Cardozo, 2020-03-16 In *The Altruist in Politics* Benjamin N. Cardozo explores the intricate interplay between ethics and governance presenting a philosophical examination of altruism's role within the political sphere. Written in a reflective and accessible style, Cardozo examines how moral values can shape political decisions, emphasizing that true leadership requires a commitment to serving the greater good. Through a series of thought-provoking essays and analyses, he critiques contemporary political practices, urging leaders to embody altruistic principles in their policies and actions. Benjamin N. Cardozo, a distinguished jurist and Supreme Court Justice known for his profound legal insights, drew upon his extensive judicial experience and moral philosophy in crafting this work. His background in law and public service provided him with a unique perspective on the responsibilities of political figures, particularly during an era marked by growing cynicism towards government institutions. Cardozo's commitment to public ethical discourse is evident throughout his writing, as he sought to challenge and inspire future generations of leaders. This book is highly recommended for scholars, political theorists, and anyone interested in the moral foundations of governance. Cardozo's eloquent arguments not only illuminate the importance of altruism in politics but also provide a compelling call to action for individuals engaged in public service, an essential read for those seeking to understand the ethical duties of political leaders in a democratic society.

The Altruism Equation Lee Alan Dugatkin, 2022-11-29 In a world supposedly governed by ruthless survival of the fittest, why do we see acts of goodness in both animals and humans? This problem plagued Charles Darwin in the 1850s as he developed his theory of evolution through natural selection. Indeed, Darwin worried that the goodness he observed in nature could be the Achilles heel of his theory. Ever since then, scientists and other thinkers have engaged in a fierce debate about the origins of goodness that has dragged politics, philosophy, and religion into what remains a major question for evolutionary biology. *The Altruism Equation* traces the history of this debate from Darwin to the present through an extraordinary cast of characters: from the Russian prince Petr Kropotkin, who wanted to base society on altruism, to the brilliant biologist George Price, who fell into poverty and succumbed to suicide as he obsessed over the problem. In a final surprising turn, William Hamilton, the scientist who came up with the equation that reduced altruism to the cold language of natural selection, desperately hoped that his theory did not apply to humans. Hamilton's Rule, which states that relatives are worth helping in direct proportion to their blood-relatedness, is as fundamental to evolutionary biology as Newton's laws of motion are to physics. But even today, decades after its formulation, Hamilton's Rule is still hotly debated among those who cannot accept that goodness can be explained by a simple mathematical formula. For the first time, Lee Alan Dugatkin brings to life the people, the issues, and the passions that have surrounded the altruism debate. Readers will be swept along by this fast-paced tale of history, biography, and scientific discovery.

The Biological Mind Justin Garson, 2014-10-17 For some biology explains all there is to know about the mind Yet many big questions remain is the mind shaped by genes or the environment If mental traits are the result of adaptations built up over thousands of years as evolutionary psychologists claim how can such claims be tested If the mind is a machine as biologists argue how does it allow for something as complex as human consciousness The Biological Mind A Philosophical Introduction explores these questions and more using the philosophy of biology to introduce and assess the nature of the mind Drawing on the four key themes of evolutionary biology molecular biology and genetics neuroscience and biomedicine and psychiatry Justin Garson addresses the following key topics moral psychology altruism and levels of selection evolutionary psychology and modularity genes environment and the nature nurture debate neuroscience reductionism and the relation between biology and free will function selection and mental representation psychiatric classification and the maladapted mind Extensive use of examples and case studies is made throughout the book and additional features such as chapter summaries annotated further reading and a glossary make this an indispensable introduction to those teaching philosophy of mind and philosophy of psychology It will also be an excellent

The Seven Big Myths about Marriage Christopher Kaczor, Jennifer Kaczor, 2014-01-23 This work explores some of the most interesting and vexing problems in contemporary life Appealing to reason rather than religious authority the book tackles the most controversial and talked about positions of the Catholic Church on contraception on marriage on reproductive technologies on cohabitation and on divorce arguing for the reasonableness of the Church's views on these issues The book's interdisciplinary approach following the precedent of Thomas Aquinas looks to human happiness and fulfillment properly understood in seeking the answers to questions about how to live It aims to show to skeptical readers that what the Catholic Church teaches about controversial issues is rationally justified by considering evidence from psychology sociology and philosophy The foundation of Kaczor's approach is happiness We all want to be happy Every day in whatever we do we seek this goal But what exactly is happiness And how can we find it The saints and psychologists agree there can be no real happiness without authentic love erotic love friendship love and self giving love agape From this foundation of happiness Kaczor explores the nature of marriage and the love they promise to each other which is agape a selfgiving love that is the choice to do good for the other He also examines alternatives to covenant marriage such as polygamy and same-sex marriage as well as cohabitation Finally the book explores the value of children To make sense of Catholic teaching on contraception he says that we must first reconsider the value of fertility and having children Only in this perspective can one begin to understand what the Church teaches
