So Deep Is The Ocean:

Sid and the Very Hard to Find Squid James O'Hanlon, 2025-06-02 No one has ever seen a colossal squid in the wild but Sid is determined to be the first. Join Sid on his exciting quest to find this incredibly rare animal. Along the way Sid encounters other strange creatures until he eventually discovers that sometimes the joy of exploration is more about the unexpected journey and not the ending. Look closely and you might just find a cheeky colossal squid too. Reading level varies from child to child but we recommend this book for ages 5 to 9. Jonathan Cowie, 2013 The second edition of this acclaimed text has been fully updated and substantially expanded to include the considerable developments since publication of the first edition in our understanding of the science of climate change its impacts on biological and human systems and developments in climate policy. Written in an accessible style it provides a broad review of past present and likely future climate change from the viewpoints of biology ecology human ecology and Earth system science. It will again prove to be invaluable to a wide range of readers from students in the life sciences who need a brief overview of the basics of climate science to atmospheric science geography geoscience and environmental science students who need to understand the biological and human ecological implications of climate change. It is also a valuable reference text for those involved in environmental monitoring conservation and policy making. **Outlines of Physical Geography** George William Fitch, 1856 **Marine Biology: A Very Short Introduction** Philip V. Mladenov, 2013-09-26 The marine environment is the largest most important and yet most mysterious habitat on our planet. It contains more than 99% of the world's living space produces half of its oxygen plays a critical role in regulating its climate and supports a remarkably diverse and exquisitely adapted array of life forms from microscopic viruses bacteria and plankton to the largest existing animals. As the 21st century progresses human activities such as overfishing coastal development plastic pollution oil spills nutrient pollution the spread of exotic species and the emission of climate changing greenhouse gases are posing a significant threat to the marine environment and to many of its life forms. In this unique Very Short Introduction Philip Mladenov provides a comprehensive overview of marine biology providing a tour of marine life and marine processes that ranges from the polar oceans to tropical coral reefs and from the intertidal to the hydrothermal vents of the deep sea. Prince,1889 *Dynamics of the Tropical Atmosphere and Oceans* Peter J. Webster,2020-06-08 This book presents a unique and comprehensive view of the fundamental dynamical and thermodynamic principles underlying the large circulations of the coupled ocean atmosphere system Dynamics of The Tropical Atmosphere and Oceans provides a detailed description of macroscale tropical circulation systems such as the monsoon the Hadley and Walker Circulations El Ni o and the tropical ocean warm pool These macroscale circulations interact with a myriad of higher frequency systems ranging from convective cloud systems to migrating equatorial waves that attend the low frequency background flow Towards understanding and predicting these circulation systems A comprehensive overview of the dynamics and thermodynamics of large scale tropical atmosphere and oceans is presented using both a reductionist and holistic perspectives of the coupled tropical system The reductionist perspective provides a detailed description of the individual elements of the ocean and atmospheric circulations The physical nature of each component of the tropical circulation such as the Hadley and Walker circulations the monsoon the incursion of extratropical phenomena into the tropics precipitation distributions equatorial waves and disturbances described in detail

The holistic perspective provides a physical description of how the collection of the individual components produces the observed tropical weather and climate. How the collective tropical processes determine the tropical circulation and their role in global weather and climate is provided in a series of overlapping theoretical and modelling constructs. The structure of the book follows a graduated framework. Following a detailed description of tropical phenomenology, the reader is introduced to dynamical and thermodynamical constraints that guide the planetary climate and establish a critical role for the tropics. Equatorial wave theory is developed for simple and complex background flows, including the critical role played by moist processes. The manner in which the tropics and the extratropics interact is then described, followed by a discussion of the physics behind the subtropical and near-equatorial precipitation, including arid regions. The El Niño phenomena and the monsoon circulations are discussed, including their covariance and predictability. Finally, the changing structure of the tropics is discussed in terms of the extent of the tropical ocean warm pool and its relationship to the intensity of global convection and climate change.

Dynamics of the Tropical Atmosphere and Oceans is aimed at advanced undergraduate and early career graduate students. It also serves as an excellent general reference book for scientists interested in tropical circulations and their relationship with the broader climate system.
