The Mediterranean Region from Crust to Mantle William Cavazza,Francois M. Roure,Wim Spakman,Gerard M. Stampfli,Peter A. Ziegler,2012-12-06 A publication of the Mediterranean Consortium for the 32nd International Geological Congress The Pan-Alpine Conservation Strategy for the Lynx Anja Molinari-Jobin,Council of Europe,2003-01-01 The Lynx was reintroduced in Switzerland in 1971 and has since increased its population to cover a substantial part of the Alps The re introduction was followed by a monitoring programme that has shown that the species still faces some challenges for its survival in the region The Pan Alpine Conservation Strategy for the Lynx PACS presented in this document states that no Alpine country can host a viable lynx population in isolation as all regional populations will be transboundary and notes that international co operation is essential for the conservation of shared populations and even more to solve the mutual problems The Strategy was endorsed by the Standing Committee to the Bern Convention in 2001 **The Mountain** Bernard Debarbieux,Gilles Rudaz,2015-09-10 In The Mountain geographers Bernard Debarbieux and Gilles Rudaz trace the origins of the very concept of a mountain showing how it is not a mere geographic feature but ultimately an idea one that has evolved over time influenced by changes in political climates and cultural attitudes To truly understand mountains they argue we must view them not only as material realities but as social constructs ones that can mean radically different things to different people in different settings From the Enlightenment to the present day and using a variety of case studies from all the continents the authors show us how our ideas of and about mountains have changed with the times and how a wide range of policies from border delineation to forestry as well as nature protection and social programs have been shaped according to them A rich hybrid analysis of geography history culture and politics the book promises to forever change the way we look at mountains Introduction to Switzerland Gilad James, PhD, Switzerland is a small landlocked country located in the heart of Europe It is famous for its soaring mountains sparkling lakes and picturesque villages It is one of the wealthiest countries in the world with a highly developed economy and a high standard of living Switzerland is a diverse country with four official languages German French Italian and Romansh It is home to over eight million people many of whom live in major cities such as Zurich Geneva and Bern Despite its small size Switzerland has a vibrant culture that celebrates its unique history and traditions It is known for its world renowned chocolates cheeses and watches as well as for its stunning alpine landscapes Whether you are interested in outdoor adventures or cultural experiences Switzerland has something to offer every traveler *Dynamics and Stochasticity in Transportation Systems Part II* Giulio E Cantarella,Chiara Fiori,Lorenzo Mussone,2024-01-04 Dynamics and Stochasticity in Transportation Systems Part II Equations and Examples goes beyond theory and mathematical models to give readers a practical understanding of dynamic and stochastic

Tectonic Aspects of the Alpine-Dinaride-Carpathian System Siegfried Siegesmund, Bernhard Fügenschuh, Niko Froitzheim, 2008 The Alps Carpathians and Dinarides form a complex highly curved and strongly coupled orogenic system Motions of the European and Adriatic plates gave birth to a number of oceans and microplates that led to several distinct stages of collision Although the Alps serve as a classical example of collisional orogens it becomes clearer that substantial questions on their evolution can only be answered in the Carpathians and Dinarides Our understanding of the geodynamic evolution of the Alpine Dinaride Carpathian System has substantially improved and will continue to develop this is thanks to collaboration between eastern and western Europe but also due to the application of new methods and the launch of research initiatives The largely field based contributions investigate the following subjects pre Alpine heritage and Alpine reactivation Mesozoic palaeogeography and Alpine subduction and collision processes extrusion tectonics from the Eastern Alps to the Carpathians and the Pannonian Basin orogen parallel and orogen perpendicular extension record of orogeny in foreland basins tectonometamorphic evolution and relations between the Alps Apennines and Corsica
