About Face Richard T. Gray, 2004 A critical history of physiognomic thought in German speaking Europe that traces the roots of twentieth century racial profiling to the Enlightenment Once associated with astrology and occultist prophecy the art of interpreting personal character based on facial and other physical features dates back to antiquity About Face tells the intriguing story of how physiognomics became particularly popular during the Enlightenment no longer as a mere parlor game but as an empirically grounded discipline The story expands to illuminate an entire tradition within German culture stretching from Goethe to the rise of Nazism In About Face Richard T Gray explores the dialectical reversal from the occult to the scientific realm that entered physiognomic thought in the late eighteenth century beginning with the positivistic writings of the Swiss pastor Johann Caspar Lavater Originally claimed to promote understanding and love physiognomics devolved into a system aimed at valorizing a specific set of physical moral and emotional traits and stamping everything else as deviant This development not only reinforced racial national and characterological prejudices but lent such beliefs a presumably scientific grounding In the period following World War I physiognomics experienced yet another unprecedented boom in popularity Gray explains how physiognomics had by then become a highly respected super discipline that embraced many prominent strands of German thought the Romantic philosophy of nature the life philosophy propagated by Dilthey and Nietzsche the cultural pessimism of Schopenhauer Husserl's method of intuitive observation Freudian psychoanalysis and early twentieth century eugenics and racial biology A rich exploration of German culture About Face offers fresh insight into the intellectual climate that allowed the dangerous thinking of National Socialism to take hold
