*Multimedia Modeling - Modeling Multimedia Information & Systems (Mmm 2000)* Shuji Hashimoto, 2000-10-27 Since the beginning of human history we have had a communication network that is identical with the physical distribution network In the late 19th century we established the energy network to distribute electric and thermal energy launching the modern society The analog communication network became popular in the middle of the 20th century And now at the end of the 20th century we have global digital information networks Along with the advancement of the communication network the progress of the information processing technology can be classified into three historical phases The first phase technology is physical information processing treating physical data from the real world This technology is often called signal processing and is based on the physical law of nature The second phase is free from the physical constraints It is logical information processing dealing with knowledge and rules The most important aspect of this phase is consistency Provable is employed to confirm the reality of the system Based on the advanced computer and network technology we are entering the third phase of information processing which is Kansei information processing Kansei is a Japanese word expressing some subjective ability referred to as sensibility intuition affection or emotion Emotional resonance or consent is important in the pursuit of reality in this phase Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing It will provide a next generation framework to construct a human centered information environment that is more comfortable and more productive This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications It contains 30 technical articles all of which were selected after vigorous peer reviews for presentation at the International Conference on Multimedia Modeling held in Nagano Japan on 13 15 November 2000 Multimedia Technologies: Concepts, Methodologies, Tools, and Applications Syed, Mahbubur Rahman, 2008-06-30 This book offers an in depth explanation of multimedia technologies within their many specific application areas as well as presenting developing trends for the future Provided by publisher *Managing Multimedia Semantics* Uma Srinivasan, Surya Nepal, 2005-01-01 This book is aimed at researchers and practitioners involved in designing and managing complex multimedia information systems Provided by publisher *Research and Advanced Technology for Digital Libraries* Panos Constantopoulos, Ingeborg T. Solvberg, 2003-06-30 Digital libraries DLs are major advances in information technology that frequently fall short of expectations 7 28 Covi Kling 7 argue that understanding the wider context of technology use is essential to understanding digital library use and its plementation in different social worlds Recent health informatics research also gues that social and organisational factors can determine the success or failure of healthcare IT developments 8 11 12 Heathfield 11 suggests that this is due to the complex autonomous nature of the medical discipline and the specialized clinician or software engineer approach to system development Negative reactions to these systems is often due to inappropriate system design and poor implementation H ever there may be other less obvious

social and political repercussions of information system design and deployment Symon et al 26 have identified within a hospital scenario how social structures and work practices can be disrupted by technology implementation Although these systems often deal with sensitive personal information other system design research has found that apparently innocuous data can be perceived as a threat to social and political stability 1 2 3 To understand the impact of DLs within the medical profession an in depth evaluation is required of the introduction and later development of these applications within their specific social and organisational settings However as Covi Kling 7 have highlighted there are few high level theories that aid designers in understanding the implication of these issues for DL design and implementation
