has been a strong need in the plastic and related industries for a detailed practical book on designing with plastics and composites reinforced plastics This one source book meets this criterion by clearly explaining all aspects of designing with plastics as can be seen from the Table of Contents and Index It provides information on what is ahead as well as today s technology It explains how to interrelate the process of meeting design performance requirements with that of selecting the proper plastic and manufacturing process to make a product at the lowest cost This book has been prepared with an awareness that its usefulness will depend greatly upon its simplicity The overall guiding premise has therefore been to

provide all essential information Each chapter is organized to best present a methodology for designing with plastics and composites of industrial designers whether in engineering This book will prove useful to all types or involved in products molds dies or equipment and to people in new product ventures research and development marketing purchasing and management who are involved with such different products as appliances the building industry autos boats electronics furniture medical recreation space vehicles and others In this handbook the basic essentials of the properties and processing behaviors of plastics are presented in a single source intended to be one the user will want to keep within easy reach

High Temperature and Environmental Effects on Polymeric Composites Thomas S. Gates, Abdul-Hamid Zureick, 1997 Proceedings of the American Society for Composites, Seventeenth Technical Conference C. T. Sun, 2002-10-24 Fatigue of Composite Materials Ronald F. Gibson, 2013 Presents investigations into fatigue in composite materials and structures Sections include research into aspects of fatigue modeling including prediction of fatigue life fatigue strength and fatigue crack growth rate experimental characterization of fatigue in composites and discussing fatigue behavior of fullscale composite structures **High Modulus Fiber Composites in Ground Transportation and High Volume Applications** Dale W. Wilson, 1985 Fatigue of Composite Materials K.L. Reifsnider, 2012-12-02 This book provides the first comprehensive review of its kind on the long term behaviour of composite materials and structures subjected to time variable mechanical thermal and chemical influences a subject of critical importance to the design development and certification of high performance engineering structures Specific topics examined include damage damage characterization and damage mechanics fatigue testing and evaluation fatigue behaviour of short and long fibre reinforced polymer and metal matrix materials viscoelastic and moisture effects delamination statistical considerations the modeling of cumulative damage development and life prediction The volume provides an extensive presentation of data discussions and comparisons on the behaviour of the major types of material systems in current use as well as extensive analysis and modeling including the first presentation of work not found elsewhere The book will be of special interest to engineers concerned with reliability maintainability safety certification and damage tolerance to materials developers concerned with making materials for long term service especially under severe loads and environments and to lecturers students and researchers involved in material system design performance solid mechanics fatigue durability and composite materials The scope of the work extends from entry level material to the frontiers of the subject Composites Engineering Handbook P.K. Mallick, 1997-03-19 Offers information on the fundamental principles processes methods and procedures related to fibre reinforced composites The book presents a comparative view and provides design properties of polymeric metal ceramic and cement matrix composites It also gives current test methods joining techniques and design methodologies Stress Concentrations in Laminated Composites Seng C. Tan, 2017-10-19 From the Author's Preface The objective of this book is to provide a thorough and systematic study of the problem of laminated composites containing stress concentrations Stress

concentrations are introduced in laminated plates in the forms of circular holes elliptical openings and straight cracks These forms of cutouts have many practical applications and are familiar to most engineers Stress concentrations exist in all known structural components Stress concentrations have great practical importance because they are normally the cause of failure In addition to stress analyses of laminated composites we need more fundamental understanding of the failure mode the failure criterion the effects on global laminate response and the design of composites in the presence of stress concentrations In this book all the subjects studied are closely related to the problem of stress concentrations in laminated composites All the models are verified with many experimental results The underlying objective of this comprehensive study is to give the readers an in depth and thorough understanding of the problem of stress concentrations in composites This book is the first to address the problem of laminated composites containing stress concentrations in a systematic way
