Sound And Vision Dataworld:

Cybermedia Carol Vernallis, Holly Rogers, Jonathan Leal, Selmin Kara, 2021-10-21 We are experiencing a time when digital technologies and advances in artificial intelligence, robotics and big data are redefining what it means to be human. How do these advancements affect contemporary media and music? This collection traces how media with a focus on sound and image engages with these new technologies. It bridges the gap between science and the humanities by pairing humanists' close readings of contemporary media with scientists' discussions of the science and math that inform them. This text includes contributions by established and emerging scholars performing across the aisle research on new technologies exploring topics such as facial and gait recognition, EEG and audiovisual materials, surveillance and sound and images in relation to questions of sexual identity, race, ethnicity, disability and class, and includes examples from a range of films and TV shows including *Blade Runner*, *Black Mirror*, *Mr. Robot*, *Morgan*, *Ex Machina* and *Westworld*. Through a variety of critical, theoretical, proprioceptive and speculative lenses, the collection facilitates interdisciplinary thinking and collaboration and provides readers with ways of responding to these new technologies.

Data Mining John Wang, 2003-01-01 Data Mining Opportunities and Challenges presents an overview of the state of the art approaches in this new and multidisciplinary field of data mining. The primary objective of this book is to explore the myriad issues regarding data mining, specifically focusing on those areas that explore new methodologies or examine case studies. This book contains numerous chapters written by an international team of forty-four experts representing leading scientists and talented young scholars from seven different countries.

Open Data Exposed Bastiaan van Loenen, Glenn Vancauwenberghe, Joep Crompvoets, 2018-10-25 The main objectives of this book are to expose key aspects that have a relevance when dealing with open data, viewed from different perspectives, and to provide appealing examples of how open data is implemented worldwide. The concept of open data as we know it today is the result of many different initiatives, both of a legislative and non-legislative nature, and promoted by a wide range of actors. Numerous regulatory antecedents to foster the concept of open data and embed it in national and international policy agendas have been undertaken on both sides of the Atlantic, as well as at a supranational level. The book highlights a number of the efforts made to promote open data in Europe, Asia and the United States. In addition to new insights, practical guidance and multiple disciplinary perspectives on open data, the book also addresses the transformation of current developments towards open data, which may be referred to as the democratisation of data. This book will support open data practitioners as well as open data scholars in their endeavours to promote open data implementation and research. Bastiaan van Loenen is associate professor and director of the Knowledge Centre Open Data at the Faculty of Architecture and The Built Environment of Delft University of Technology in the Netherlands, as is Glenn Vancauwenberghe who is a post-doctoral researcher, and Joep Crompvoets is a professor at the Public Governance Institute of the KU Leuven in Belgium.
