Comyn, 2012-12-06 Polymers are permeable whilst ceramics glasses and metals are gener ally impermeable This may seem a disadvantage in that polymeric containers may allow loss or contamination of their contents and aggressive substances such as water will diffuse into polymeric struc tures such as adhesive joints or fibre reinforced composites and cause weakening However in some cases permeability is an advantage and one particular area where this is so is in the use of polymers in drug delivery systems Also without permeable polymers we would not enjoy the wide range of dyed fabrics used in clothing and furnishing The fundamental reason for the permeability of polymers is their relatively high level of molecular motion a factor which also leads to their high levels of creep in comparison with ceramics glasses and metals The aim of this volume is to examine some timely applied aspects of polymer permeability In the first chapter basic issues in the mathema tics of diffusion are introduced and this is followed by two chapters where the fundamental aspects of diffusion in polymers are presented The following chapters then each examine some area of applied science where permeability is a key issue Each chapter is reasonably self contained and intended to be informative without frequent outside reference This inevitably leads to some repetition but it is hoped that this is not excessive Molecular Interfacial Phenomena of Polymers and Biopolymers P Chen, 2005-07-22 One of the most exciting areas of polymer research is the study of interfacial phenomena and their practical applications This major work reviews the key research in this important area and is used in such areas as biomaterials Part one looks at the thermodynamics kinetics and other fundamental properties of polymer surfaces and interfaces The second part of the book reviews ways of characterising and manipulating interfacial phenomena It includes examples of practical applications such as vaccine delivery tissue engineering and the development of therapeutic lung surfactants With its distinguished editor and international team of contributors Molecular interfacial phenomena of polymers
