Wireless Communications 2007 CNIT Thyrrhenian Symposium Silvano Pupolin, 2007-12-18 The 18th Tyrrhenian Workshop on digital communications is devoted to wireless communications In the last decade wireless communications research boosted launching new standards and proposing new techniques for the wireless technology We moved from the UTRA standard capable to transmit 0.5 bit/s/Hz to WLAN which is promising 27 bit/s/Hz Now wireless communication systems are facing a flourishing of new proposals moving from multiple antennas at transmitter and receiver side MIMO systems to new powerful Forward Error Correction Codes to adapt to radio resource management algorithms The new challenge however is the move towards multimedia communications and IP technology This move implies efforts in several new aspects First of all an open network as IP imposes the necessity of a secure network to guarantee the privacy of the ongoing communications avoid the use of the networks by unauthorized customers avoid the misuses and the charge to third parties of the cost of the connection Also quality of service QoS of the communications is becoming a must in IP networks which are carrying services which need a guaranteed QoS as telephony real time services etc To get this new target some form of access control to the network must be setup Recently new form of communication networks has appeared to collect data for several applications sensor networks ad hoc networks etc and they need a connection with a backbone

network which could be a wireless one with a larger range than the sensor or ad hoc networks
