Symbolic Execution and Quantitative Reasoning Corina S. Păsăreanu,2022-05-31 This book reviews recent advances in symbolic execution and its probabilistic variant and discusses how they can be used to ensure the safety and security of software systems Symbolic execution is a systematic program analysis technique which explores multiple program behaviors all at once by collecting and solving symbolic constraints collected from the branching conditions in the program The obtained solutions can be used as test inputs that execute feasible program paths Symbolic execution has found many applications in various domains such as security smartphone applications operating systems databases and more recently deep neural networks uncovering subtle errors and unknown vulnerabilities We review here the technique has also been extended to reason about algorithmic complexity and resource consumption Furthermore symbolic execution has been recently extended with probabilistic reasoning allowing one to reason about quantitative properties of software systems The approach computes the conditions to reach target program events of interest and uses model counting to quantify the fraction of the input domain satisfying these conditions thus computing the probability of event occurrence This probabilistic information can be used for example to compute the reliability of an aircraft controller under different wind conditions modeled probabilistically or to quantify the leakage of sensitive data in a software system using information theory metrics such as Shannon entropy This book is intended for students and software engineers who are interested in advanced techniques for testing and verifying software systems **Symbolic Execution and Quantitative Reasoning** Corina S. us to raise that dark curtain designed to keep us out binary analysis can help The goal of all binary analysis is to determine and possibly modify the true properties of binary programs to understand what they really do rather than what we think they should do While reverse engineering and disassembly are critical first steps in many forms of binary analysis there is much more to be learned This hands on guide teaches you how to tackle the fascinating but challenging topics of binary analysis and instrumentation and helps you become proficient in an area typically only mastered by a small group of expert hackers It will take you from basic concepts to state of the art methods as you dig into topics like code injection disassembly dynamic taint analysis and binary instrumentation Written for security engineers hackers and those with a basic working knowledge of C C and x86 64 Practical Binary Analysis will teach you in depth how binary programs work and help you acquire the tools and techniques needed to gain more control and insight into binary programs Once you ve completed an introduction to basic binary formats you ll learn how to analyze binaries using techniques like the GNU Linux binary analysis toolchain disassembly and code injection You ll then go on to implement profiling tools with Pin and learn how to build your own dynamic taint analysis tools with libdft and symbolic execution tools using Triton You ll learn how to Parse ELF and PE binaries and build a binary loader with libbfd Use data flow analysis techniques like program tracing slicing and reaching definitions analysis to reason about runtime flow of your programs Modify ELF binaries with techniques like parasitic code injection and hex editing Build custom disassembly tools with Capstone Use binary instrumentation to circumvent anti analysis tricks commonly used by malware Apply taint analysis to detect control hijacking and data leak attacks Use symbolic execution to build automatic exploitation tools With exercises at the end of each chapter to help solidify your skills you ll go from understanding basic assembly to performing some of the most sophisticated binary analysis and instrumentation Practical Binary Analysis gives you what you need to work effectively with binary programs and transform your knowledge from basic understanding to expert level proficiency   **Deductive Software Verification – The KeY Book** Wolfgang Ahrendt,Bernhard Beckert,Richard Bubel,Reiner Hähnle,Peter H. Schmitt,Mattias Ulbrich,2016-12-19 Static analysis of software with deductive methods is a highly dynamic field of research on the verge of becoming a mainstream technology in software engineering It consists of a large portfolio of mostly fully automated analyses formal verification test generation security analysis visualization and debugging All of them are realized in the state of art deductive verification framework KeY This book is the definitive guide to KeY that lets you explore the full potential of deductive software verification in practice It contains the complete theory behind KeY for active researchers who want to understand it in depth or use it in their own work But the book also features fully self contained chapters on the Java Modeling Language and on Using KeY that require nothing else than familiarity with Java All other chapters are accessible for graduate students M Sc level and beyond The KeY framework is free and open software downloadable from the book companion website which contains also all code examples mentioned in this book   **Logic-Based Program Synthesis and Transformation** Maribel Fernández,2021-02-12 This

book constitutes the refereed proceedings of the 30th International Conference on Logic Based Program Synthesis and Transformation LOPSTR 2020 which was held during September 7 9 2020 The 15 papers presented in this volume were carefully reviewed and selected from a total of 31 submissions The book also contains two invited talks in full paper length The contributions were organized in topical sections named rewriting unification types verification model checking and probabilistic programming program analysis and testing and logics *Tests and Proofs* Bernhard Beckert,Reiner Hähnle,2008-04-04 This volume contains the research papers invited papers and abstracts of torials presented at the Second International Conference on Tests and Proofs TAP 2008 held April 9 11 2008 in Prato Italy TAP was the second conference devoted to the convergence of proofs and tests It combines ideas from both areasfor the advancement of softwarequality To provethe correctnessof a programis to demonstrate through impeccable mathematical techniques that it has no bugs to test a programis to run it with the expectation of discovering bugs On the surface the two techniques seem contradictory if you have proved your program it is fruitless to comb it for bugs and if you are testing it that is surely a sign that you have given up on anyhope of proving its correctness Accordingly proofs and tests have since the onset of software engineering research been pursued by distinct communities using rather di erent techniques and tools And yet the development of both approaches leads to the discovery of c mon issues and to the realization that each may need the other The emergence of model checking has been one of the rst signs that contradiction may yield to complementarity but in the past few years an increasing number of research e orts have encountered the need for combining proofs and tests dropping e lier dogmatic views of their incompatibility and taking instead the best of what each of these software engineering domains has to o er

   Computational Science -- ICCS 2005 V.S. Sunderam,2005-05-12 The three volume set LNCS 3514 3516 constitutes the refereed proceedings of the 5th International Conference on Computational Science ICCS 2005 held in Atlanta GA USA in May 2005 The 464 papers presented were carefully reviewed and selected from a total of 834 submissions for the main conference and its 21 topical workshops The papers span the whole range of computational science ranging from numerical methods algorithms and computational kernels to programming environments grids networking and tools These fundamental contributions dealing with computer science methodologies and techniques are complemented by papers discussing computational applications and needs in virtually all scientific disciplines applying advanced computational methods and tools to achieve new discoveries with greater accuracy and speed *Formal Methods for Components and Objects* Frank S. de Boer,Marcello M. Bonsangue,Stefan Hallerstede,Michael Leuschel,2010-11-11 All modern industries rely on large and complex software systems In order to construct such large systems in a systematic manner the focus of the development methodologies has switched in the last two decades from functional to structural issues Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to the development of large systems requires a greater emphasis on specification modeling and validation techniques supporting

the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like Java This state of the art survey presents the outcome of the 8th Symposium on Formal Methods for Components and Objects held in Eindhoven The Netherlands in November 2009 The volume contains 17 revised contributions submitted after the symposium by speakers from each of the following European IST projects the IST FP6 project BIONETS on biologically inspired services evolution for the pervasive age the IST FP7 project COMPAS on compliance driven models languages and architectures for services the IST FP6 project CREDO on modelling and analysis of evolutionary structures for distributed services the IST FP7 DEPLOY on industrial deployment of advanced system engineering methods for high productivity and dependability the IST FP7 project HATS on highly adaptable and trustworthy software using formal methods the IST FP7 project INESS on integrated European railway signalling system the IST FP7 project MOGENTES on model based generation of tests for dependable embedded systems the IST FP6 project PROTEST on property based testing and the IST FP7 project QUASIMODO on quantitative system properties in model driven design of embedded systems **Proceedings of the Ninth International Joint Conference on Artificial Intelligence** International Joint Conferences on Artificial Intelligence,1985
