Symbolic Logic Harry J. Gensler,1990 **Instructor's Manual with Solutions** Harry J. Gensler,1990 Formal Ethics Harry J. Gensler,2002-09-11 Formal Ethics is the study of formal ethical principles The most important of these perhaps even the most important principle of life is the golden rule Treat others as you want to be treated Although the golden rule enjoys support amongst different cultures and religions in the world philosophers tend to neglect it Formal Ethics gives the rule the attention it deserves Modelled on formal logic Formal Ethics was inspired by the ethical theories of Kant and Hare It shows that the basic formal principles of ethics like the golden rule are very similar to principles of logic and gives a firm basis for our ethical thinking As an introduction to moral rationality Formal Ethics also considers non formal elements and is applied to areas of practical concern such as racism and moral education *Introduction to Logic* Harry Gensler,2002-09-11 Introduction to Logic offers one of the most clear interesting and accessible introductions to what has long been considered one of the most challenging subjects in philosophy Harry Gensler engages students with the basics of logic through practical examples and important arguments both in the history of philosophy and from contemporary philosophy Using simple and manageable methods for testing arguments students are led step by step to master the complexities of logic The companion LogiCola instructional program and various teaching aids including a teacher s manual are available from the book s website www.routledge.com/textbooks/gensler_logic **The Primary Logic** Michele Malatesta,1997 *The A to Z of Logic* Harry J. Philosophical Foundations of the African Humanities through Postcolonial Perspectives ,2019-03-19

Philosophical Foundations of the African Humanities through Postcolonial Perspectives critiques recent claims that the humanities especially in public universities in poor countries have lost their significance defining missions methods and standards due to the pressure to justify their existence The predominant responses to these claims have been that the humanities are relevant for creating a world culture to address the world s problems This book argues that behind such arguments lies a false neutrality constructed to deny the values intrinsic to marginalized cultures and peoples and to justify their perceived inferiority These essays by scholars in postcolonial studies critique these false claims about the humanities through critical analyses of alterity difference and how the Other is perceived defined and subdued Contributors Gordon S K Adika Kofi N Awoonor E John Collins Kari Dako Mary Esther Kropp Dakubu James Gibbs Helen Lauer Bernth Lindfors J H Kwabena Nketia Abena Oduro Gayatri Chakravorty Spivak Ol f mi T w Alexis B Tengan Kwasi Wiredu Francis Nii Yartey

Carroll,John J. Furlong,2007-03-19 In an age where appearances are often substituted for what really is deception and falsity for honesty and truth this metaphysics book takes things as they actually are and discovers that reality is actuality which as subsistent is God that philosophical knowledge in its content is caused by what is known and is objectively true It considers goodness and beauty human existents as individual relational units e g the family agents and goals chance and evil It is in contrast with Sartrean existentialism process philosophy linguistic analysis phenomenology hermeneutics and deconstructionism Information from Processes Robert M. Losee,2012-07-31 Information is an important concept that is studied extensively across a range of disciplines from the physical sciences to genetics to psychology to epistemology Information continues to increase in importance and the present age has been referred to as the Information Age One may understand information in a variety of ways For some information is found in facts that were previously unknown For others a fact must have some economic value to be considered information Other people emphasize the movement through a communication channel from one location to another when

describing information In all of these instances information is the set of characteristics of the output of a process Yet Information has seldom been studied in a consistent way across different disciplines Information from Processes provides a discipline independent and precise presentation of both information and computing processes Information concepts and phenomena are examined in an effort to understand them given a hierarchy of information processes where one process uses others Research about processes and computing is applied to answer the question of what information can and cannot be produced and to determine the nature of this information theoretical information science The book also presents some of the basic processes that are used in specific domains applied information science such as those that generate information in areas like reasoning the evolution of informative systems cryptography knowledge natural language and the economic value of information Written for researchers and graduate students in information science and related fields Information from Processes details a unique information model independent from other concepts in computer or archival science which is thus applicable to a wide range of domains Combining theoretical and empirical methods as well as psychological mathematical philosophical and economic techniques Losee s book delivers a solid basis and starting point for future discussions and research about the creation and use of information

Text Retrieval and Filtering Robert M. Losee, 2012-12-06 Text Retrieval and Filtering Analytical Models of Performance is the first book that addresses the problem of analytically computing the performance of retrieval and filtering systems The book describes means by which retrieval may be studied analytically allowing one to describe current performance predict future performance and to understand why systems perform as they do The focus is on retrieving and filtering natural language text with material addressing retrieval performance for the simple case of queries with a single term the more complex case with multiple terms both with term independence and term dependence and for the use of grammatical information to improve performance Unambiguous statements of the conditions under which one method or system will be more effective than another are developed Text Retrieval and Filtering Analytical Models of Performance focuses on the performance of systems that retrieve natural language text considering full sentences as well as phrases and individual words The last chapter explicitly addresses how grammatical constructs and methods may be studied in the context of retrieval or filtering system performance The book builds toward solving this problem although the material in earlier chapters is as useful to those addressing non linguistic statistical concerns as it is to linguists Those interested in grammatical information should be cautioned to carefully examine earlier chapters especially Chapters 7 and 8 which discuss purely statistical relationships between terms before moving on to Chapter 10 which explicitly addresses linguistic issues Text Retrieval and Filtering Analytical Models of Performance is suitable as a secondary text for a graduate level course on Information Retrieval or Linguistics and as a reference for researchers and practitioners in industry

Subject Guide to Books in Print ,1993 **The Logic of Gilles Deleuze** Corry Shores,2020-10-15 French philosopher Gilles Deleuze wrote two logic books Francis Bacon The Logic of Sensation and The Logic of Sense However in neither of these books nor in any other works does Deleuze articulate in a formal way the features of the logic he employs He certainly does not use classical logic And the best options for the non classical logic that he may be implementing are fuzzy intuitionist and many valued These are applicable to his concepts of heterogeneous composition and becoming affirmative synthetic disjunction and powers of the false In The Logic of Gilles Deleuze Basic Principles Corry Shores examines the applicability of three non

classical logics to Deleuze's philosophy by building from the philosophical and logical writings of Graham Priest the world's leading proponent of dialetheism. Through so doing, Shores argues that Deleuze's logic is best understood as a dialethic paraconsistent many-valued logic.
