

SPHERES OF THE EARTH

ATMOSPHERE

The atmosphere is the envelope of gases surrounding Earth that extends up to approximately 100,000 km above Earth's surface. The extreme edges of the atmosphere lie about 35,000 km above the surface. Atmospheric density decreases going further away from Earth's surface. Because of this, most 99.9% of the atmosphere's mass lies within 30 km of Earth's surface.

BIOSPHERE

The biosphere includes both oceanic and terrestrial lands. On land there are a number of different, nearly recognizable communities called biomes. Biomes essentially result from the interaction of regional climates, flora and fauna, and subatomic levels of underlying surfaces, and are usually defined by their climate vegetation.

CRYOSPHERE

Derived from the Greek word *kryos*, meaning 'cold', the cryosphere encompasses those parts of the Earth system that are subject to temperatures below 0°C for at least part of the year. Its largest components, by far, are the ice sheets in Greenland and Antarctica, but the cryosphere also includes the Arctic Ocean's Sea Ice, the Bhakra, Snow, River and Lake Ice, Frozen Ground,

GEOSPHERE

The geosphere is the outer, rigid shell of the solid Earth. It is composed of the entire crust (continental and oceanic) and the top rigid portion of the mantle lying above the partially molten, less rigid asthenosphere. Softer, more plastic, rheologic plate movement over the asthenosphere, the geosphere consists of rocks broken by discontinuous surface stresses of sediment and soil.

HYDROSPHERE

The hydrosphere consists of all the water girdling Earth, whether in gas, liquid or solid. About 97% of water (H₂O) resides in the oceans. The remainder is found in the ice sheets of Greenland and Antarctica (2%), and in freshwater lakes, rivers, ground water below the surface, and water vapor in the atmosphere (2%).

Caplan, 1987-04-24 This collection of essays examines the ways in which disputes and controversies about the application of scientific knowledge are resolved Four concrete examples of public controversy are considered in detail the efficacy of Laetrile the classification of homosexuality as a disease the setting of safety standards in the workplace and the utility of nuclear energy as a source of power The essays in this volume show that debates about these cases are not confined to matters of empirical fact Rather as is seen with most scientific and technical controversies they focus on and are structured by complex ethical economic and political interests Drs Engelhardt and Caplan have brought together a distinguished group of scholars from the sciences and humanities who sketch a theory of scientific controversy and attempt to provide recommendations about the ways in which both scientists and the public ought to seek more informed resolutions

of highly contentious issues in science and technology Scientific Controversies is offered as a contribution to the better understanding of the roles of both science and nonscientific interests in disputes and controversies pertaining to science and technology *LBL Newsmagazine* ,1980 LBL Research Review ,1981
