Sync Steven Strogatz, 2004-04-29 SYNC IS A STORY OF A DAZZLING KIND OF ORDER IN THE UNIVERSE THE HARMONY THAT COMES FROM CYCLES IN SYNC THE TENDENCY TO SYNCHRONIZE IS ONE OF THE MOST FAR REACHING DRIVES IN ALL OF NATURE IT EXTENDS FROM PEOPLE TO PLANETS FROM ANIMALS TO ATOMS IN SYNC PROFESSOR STEVEN STROGATZ CONSIDERS A RANGE OF APPLICATIONS HUMAN SLEEP AND CIRCADIAN RHYTHMS MENSTRUAL SYNCHRONY INSECT OUTBREAKS SUPERCONDUCTORS LASERS SECRET CODES HEART ARRHYTHMIAS AND FADS CONNECTING ALL THROUGH AN EXPLORATION OF THE SAME MATHEMATICAL THEME SELF ORGANISATION OR THE SPONTANEOUS EMERGENCE OF ORDER OUT OF CHAOS FOCUSED ENOUGH TO PRESENT A COHERENT WORLD UNTO THEMSELVES STROGATZ S CHOSEN TOPICS TOUCH ON SEVERAL OF THE HOTTEST DIRECTIONS IN CONTEMPORARY SCIENCE

Sync Steven H. Strogatz, 2008-11-03 A pioneer in the scientific field of synchronicity examines the ground breaking work of physicists and mathematicians out to prove how spontaneous order emerges from chaos and offers a fascinating glimpse of the interconnections that exist among many disciplines places and times in the world around us Reprint 40 000 first printing

Feelings are Always Local Joke Brouwer, 2004 Interactive art organizes itself as an open system it preserves its coherence by exchanging matter energy and information with the environment In that manner interactive art is art whose state of rest must be disturbed before it can become art at all Yet it is precisely this instability makes it ever more complex Feelings are Always Local is published on the occasion of DEAF04 the Dutch Electronic Arts Festival which focuses on interactivity as open system and interactivity in open systems It features projects with a social and political slant as well as projects that have a technological or biological character Also included are essays interviews and projects by DEAF04 international theorists and artists

Sync Steven H. Strogatz, 2004-04-14 The tendency to synchronize may be the most mysterious and pervasive drive in all of nature It has intrigued some of the most brilliant minds of the 20th century including Albert Einstein Richard Feynman Norbert Wiener Brian Josephson and Arthur Winfree At once elegant and riveting Sync tells the story of the dawn of a new science Steven Strogatz a leading mathematician in the fields of chaos and complexity theory explains how enormous systems can synchronize themselves from the electrons in a superconductor to the pacemaker cells in our hearts He shows that although these phenomena might seem unrelated on the surface at a deeper level there is a connection forged by the unifying power of mathematics

In Sync Andrzej K. Nowak, Robin R. Vallacher, Ryszard Praszkie, Agnieszka Rychwalska, Michal Zochowski, 2020-03-16 This book introduces the reader to the concept of functional synchronization and how it operates on very different levels in psychological and social systems from the emergence of thought to the formation of social relations and the structure of societies For years psychologists have investigated phenomena such as self concept social judgment social relations group dynamics and cooperation and conflict but have discussed these phenomena seorately This book shows how synchronization

provides a foundational approach to these otherwise distinct and diverse psychological processes This work shows that there is a basic tendency with many processes to become coordinated and progressively integrated into increasingly larger units through well defined processes For these larger units new and largely adaptive functions emerge Although synchronization affords progressive integration of system elements to enable correspondingly higher order functions the trajectory of synchronization is often characterized by periods of assembly and disassembly of system elements This occurs when a task is completed and synchronization is no longer essential so that the elements once again operate in an independent fashion It is argued that the disassembly resynchronization scenario occurs at all levels of psychological and social reality The implications of this approach for important issues in interpersonal relations and societal processes are discussed

Kyandoghere Kyamakya, Herwig Unger, Jean Chamberlain Chedjou, Nikolai F. Rulkov, Zhong Li, 2009-09-30 In essence the dynamics of real world systems i e engineered systems natural systems social systems etc is nonlinear The analysis of this nonlinear character is generally performed through both observational and modeling processes aiming at deriving appropriate models mathematical logical graphical etc to simulate or mimic the spatiotemporal dynamics of the given systems The complex intrinsic nature of these systems i e nonlinearity and spatiotemporal dynamics can lead to striking dynamical behaviors such as regular or irregular stable or unstable periodicity or multi periodicity torus or chaotic dynamics The various potential applications of the knowledge about such dynamics in technical sciences engineering are being intensively demonstrated by diverse ongoing research activities worldwide However both the modeling and the control of the nonlinear dynamics in a range of systems is still not yet well understood e g system models with time varying coefficients immune systems swarm intelligent systems chaotic and fractal systems stochastic systems self organized systems etc This is due amongst others to the challenging task of establishing a precise and systematic fundamental or theoretical framework e

Rebellion James Brody, 2008-03 tiny differences in the nature of individuals require that each of us discovers, arranges and sustains his or her unique partnerships and territories Because of this uniqueness you must actively steer your life rather than just letting it happen None of us is mere clay for environment's thumbs and even the youngest of ten children is a one off architect who renovates his parents Using clarity, humor and personal examples Dr James Brody shows why you simplify or complicate your life form partnerships and social networks and sometimes conform or not He also explains why certain aspects of physics are your best friends why your commonsense handles them so well why women displace men and why you shouldn't believe bell curves To illustrate Brody includes stories from his clients as well as from biologists Charles and Erasmus Darwin authors William and Henry James anthropologists Mary Leakey and Loren Eiseley and Nobel winners Richard Feynman and Rita Levi Montalcini a rich tapestry of human behavior but done in a way that gives significance to individualism using models that physics and mathematics offer Phase transitions emergent networks condensates swarming and other models are in the arsenal that he develops in the first half of the book and applies in its second half to evolution and behavior genetics conflict and suicide and resilience and personal will This is serious work yet it is not difficult to read I highly recommend it
