Syntactic Development, Its Input and Output Anat Ninio, 2011-03-03 This important new book places the syntactic learning process under close scrutiny Its focus is on the characteristics of linguistic input and the resultant output which it suggests do not follow the orderly uniform processes assumed by some versions of formalistic linguistic theory

Early Syntactic Development Melissa Bowerman, 1973-06-21 First published in 1973 this important work was the first systematic attempt to apply theoretical and methodological tools developed in America to the acquisition of a language other than English Dr Bowerman presents and analyses data from a longitudinal investigation of the early syntactic development of two Finnish children and compares their speech at two stages of development with that of American Samoan and Luo children The four language families Finno Ugric Indo European Malayo Polynesian and Nilotic respectively with very different structures and this is the first systematic comparison of the acquisition of several types of native language within a common analysis Similarities in the linguistic behaviour of children learning these four different languages are used to evaluate hypotheses about universals of language and to generate new proposals

Mandarin Development of Indonesian Immigrants'

Children Jenny Yi-chun Kuo, 2016-05-14 This book summarizes the results of a three year longitudinal project on Mandarin development among children of Indonesian mothers the second largest non Mandarin speaking immigrant group in Taiwan. Language Development and Social Interaction in Blind Children Miguel Pérez Pereira, Gina Conti-Ramsden, 1999 This book provides an up to date account of blind children's developing communicative abilities with particular emphasis on social cognition and language acquisition from infancy to early school age. It purports to foster dialogue between those interested in the study of typically developing children and those interested in the development of children who are blind and to provide insights and new explanations of why the development of blind children may differ from that of sighted children. The book also aims to identify and examine current theoretical issues which are likely to be at the centre of developments in the fields of child language and developmental psychology. Language Development and Social Interaction in Blind Children is also a timely book. The study of blind children's development constitutes a unique opportunity to study the effect of vision on development and more specifically on the development of language and certain aspects of social cognition. Current interest in the development of theory of mind and perspective taking in language learning make the case of blind children crucial to our understanding of certain aspects of psychological functioning. The book explores these issues, challenges some widely held beliefs about the development of communication in blind children and provides a cohesive picture of our knowledge to date.

A Dynamic Systems Theory Perspective on L2 Writing Development

Shaopeng Li, 2022-03-23 From the perspective of empirical complex dynamic systems, this book investigates the complex and nonlinear process of L2 writing, centering on three linguistic aspects of L2 writing development: vocabulary, syntax and discourse. Combining dynamic systems theory, variation analysis as well as data and case studies from Chinese EFL learners writing, the book critically engages with the heated discussion on dynamic patterns of L2 writing development that focus heavily on the linguistic dimensions of complexity, accuracy and fluency. The author expands the scope of the research by integrating both linguistic and functional dimensions of L2 output and examines the interaction and co-development of these dimensions. This framework helps delineate a full picture of individual learners' L2 writing dynamic patterns across all components of their communicative repertoire. The research findings suggest the developmental path of writing system for each EFL learner may differ, which is influenced by their different learning characteristics and learning environments in China. The title will appeal to scholars interested in applied linguistics and second language acquisition. Suggestions on pedagogy and language learning advanced in the book will also make it a useful read for L2 language learners and TESOL

Kuczaj, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of

such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series
