in the Bilingual Mind Elif Bamyacı,2015-12-28 This volume combines psycholinguistic experiments with typological investigations in order to provide a comprehensive exploration of the linguistic structure of verb number agreement in bilingual speakers with a particular focus on the Turkish language It takes as its starting point the question of which linguistic structures pose difficulties for bilingual speakers and then proceeds to evaluate the question by using the interface phenomenon of optional verb number agreement In doing so this volume investigates how the bilingual mind handles grammatical structures that demand high processing sources working towards a processing based linguistic framework for the bilingual mind Beginning with a thorough survey of the current research of the interface phenomenon in the bilingual mind the volume then proceeds to present two separate studies on each linguistic interface type namely semantics syntax interface and syntax pragmatics interface thus filling a number of gaps in the bilingualism research with regards to the interface phenomenon The results and conclusions of these studies are then integrated with current knowledge and research from the field within a theoretical and processing based framework in order to explore new psycholinguistic insights for the bilingual mind specifically the conclusion that the grammar of bilingual speakers is shaped according to cross linguistic tendencies Ultimately it provides a unified account and a comprehensive conclusion regarding the non native like patterns in grammar of bilingual speakers Serving as a fascinating and timely resource Competing Structures in the Bilingual Mind An Investigation of Optional Verb Number Agreement will appeal to bilingualism researchers clinical linguists cognitive scientists experimental linguists and any linguist specializing in Turkic or Altaic languages **German Sentence**

The Syntax-discourse Interface Petra Burkhardt, 2005-01-01 This book combines theoretical and experimental aspects of the establishment of dependency It provides an account of dependency relations by focusing on the representation and interpretation of referentially dependent elements particularly regular reflexives logophors and pronouns First the establishment of dependency is discussed within a model of syntax discourse correspondences that predicts an economy based dependency hierarchy contingent on the level of representation at which the dependency is formed as well as the internal structure of the dependent element and its antecedent Secondly the model s predictions are substantiated by a series of experimental studies conducted in English and Dutch providing evidence from three sources of online sentence comprehension reaction time studies Broca s aphasia patient studies and event related brain potential studies The findings show that dependencies are established at distinct levels of linguistic encoding i e syntax or discourse determined by the presence or absence of coargumenthood and the representation of the dependency forming elements

Broca's Region Yosef Grodzinsky, Katrin Amunts, 2006-04-20 Broca's region has been in the news ever since scientists realized that particular cognitive functions could be localized to parts of the cerebral cortex Its discoverer Paul Broca was one of the first researchers to argue for a direct connection between a concrete behavior in this case the use of language and a specific cortical region Today Broca's region is perhaps the most famous part of the human brain and for over a century has persisted as the focus of intense research and numerous debates The name has even penetrated mainstream culture through popular science and the theater Broca's region is famous for a good reason As language is one of the most distinctive human traits the cognitive mechanisms that support it and the tissues in which these mechanisms are housed are also quite complex and so have the potential to reveal a lot not only about how words phrases sentences and grammatical rules are instantiated in neural tissue but also and more broadly about how brain function relates to behavior Paul Broca's discoveries were an important driving force behind the more general effort to relate complex behavior to particular parts of the cerebral cortex which significantly produced the first brain maps These early studies also however suffered from the use of crude techniques definitions and distinctions as well as from ill founded and misdirected assumptions Although much has been discovered since Broca's work even today these problems have not been completely solved Nonetheless particularly as a result of important advances made in neuroimaging during the past two decades Broca's region and all language areas are currently being investigated from every angle Indeed as the volume of research into the relations between brain and language has created several communities each with its own concepts methods and considerations it seemed that it was time to stop get together and reflect on the state of the art This book is the result of that

collective reflection which took place primarily at the Broca's Region Workshop held in Jülich and Aachen Germany in June 2004. In it Yosef Grodzinsky and Katrin Amunts tried to accomplish a nearly impossible task to mix intellectual traditions and cultures and juxtapose rather disparate bodies of knowledge, styles of reasoning and forms of argumentation. Participants were scientists with diverse backgrounds, each invited to contribute his/her particular take with the hope that a coherent, perhaps even novel picture would emerge. All of the participants have a special interest in Broca's Region and represent the myriad angles from which we currently approach it: neuroanatomy, physiology, evolutionary biology, cognitive psychology, clinical neurology, functional imaging, speech and language research, computational biology, and psycho-neuro and theoretical linguistics. The book's main chapters are the contributions of the Workshop's participants and their research teams. Parts of the discussion during the Workshop are included to underscore the richness of viewpoints and to give readers an idea of the level of interaction that took place. As Broca's region is such a historically significant concept and rich area, this book contains a collection of classic and recent yet classic papers. Along with cutting-edge science, Grodzinsky and Amunts want to remind readers of the celebrated past from which much can be learned. The historical chapters include the first two papers written by Paul Broca, as well as some work by two of the most important neurologists of the nineteenth century, Ludwig Lichtheim and John Hughlings Jackson. Also included are parts of twentieth-century papers by Korbinian Brodmann, Roman Jakobson, Norman Geschwind, Harold Goodglass, and Jay Mohr. Because this book both reflects the state of the art in Broca's region research and contains a tribute to its celebrated past, it will be a valuable resource for student and professional researchers. It will also stimulate further interdisciplinary research, which is a significant contribution as the project called Broca's region encompassing the study of brain-language relations is far from finished.

Development of the Syntax-Discourse Interface S. Avrutin, 2013-04-17

In this book I address several issues of child linguistic development from the perspective of the syntax-discourse interface. Traditionally, language acquisition research has focused on the development of one of the linguistic modules, e.g. acquisition of syntax, morphology, or phonology. While this approach can be viewed as fruitful in some cases, there is a number of linguistic phenomena whose explanation depends on the interaction of different modules and therefore different domains of linguistic knowledge. A typical example is pronominal anaphora. It can be shown that to correctly use pronominal elements, normal adult speakers must possess both syntactic and pragmatic knowledge and that these kinds of knowledge must interact with each other. With regard to the language acquisition process, such phenomena suggest a somewhat different approach to the language acquisition research. Indeed, if some experimental studies show that children make errors in the construction under investigation, it will be necessary to consider these results from the point of view of the interaction of the different domains of linguistic knowledge involved in their interpretation. In other words, if this particular construction requires the integration of, for example, syntactic and discourse-based knowledge, children's errors may, in principle, be due to their lack of the former, the latter, or both kinds of knowledge and cannot be taken as direct evidence for

the underdeveloped status of just one of them **Minimalism and Beyond** Peter Kosta, Steven L. Franks, Teodora Radeva-Bork, Lilia Schürcks, 2014-09-24 The Minimalist Program is just that a program It is a challenge for syntacticians to reexamine the constructs of their models and ask what is minimally needed in order to accomplish the essential task of syntax interfacing between form and meaning This volume pushes Minimalism to its empirical and theoretical limits and brings together some of the most innovative and radical ideas to have emerged in the attempt to reduce Universal Grammar to the bare output conditions imposed by these conceptually necessary interfaces The contributors include both leading theoreticians and well known practitioners of minimalism the papers thus both respond to broad questions about the nature of human language and the architecture of grammar and provide careful analyses of specific linguistic problems Overarching issues of syntactic computation are considered such as the role of formal features the mechanics of movement and the property of displacement the construction of words and phrases the nature of Spell Out and more generally the forces driving operations The volume has the potential to reach a wide audience favoring inter theoretical debate with a concise state of the art panorama on Minimalism and advances about its future developments *From Language to Discourse* Larysa Shotropa, Noémia Jorge, Camile Tanto, Lúcia Cunha, 2014-09-18 From Language to Discourse contains selected texts from the 6th and 7th Linguistics Sharing Forums which took place at the Faculty of Social and Human Sciences of Universidade Nova de Lisboa on 25th November 2011 and 23rd November 2012 respectively The articles included in this volume present the results of ongoing research in different domains of linguistics such as phonology language acquisition syntax and terminology It is important to mention that these papers should be seen as work in progress given that the young researchers who authored them are not yet PhD degree holders However all articles have been evaluated by an academic committee prior to publication In addition this book also includes the publication of two papers authored by João Costa and Maria Antónia Coutinho senior researchers of the Linguistics Centre of the Universidade Nova de Lisboa CLUNL
