**Wind Wizard** Siobhan Roberts, 2012-12-02 How the father of wind engineering helped make the world's most amazing buildings and bridges possible With Wind Wizard Siobhan Roberts brings us the story of Alan Davenport 1932 2009 the father of modern wind engineering who investigated how wind navigates the obstacle course of the earth's natural and built environments and how when not properly heeded wind causes buildings and bridges to teeter unduly sway with abandon and even collapse In 1964 Davenport received a confidential telephone call from two engineers requesting tests on a pair of towers that promised to be the tallest in the world His resulting wind studies on New York's World Trade Center advanced the art and science of wind engineering with one pioneering innovation after another Establishing the first dedicated boundary layer wind tunnel laboratory for civil engineering structures Davenport enabled the study of the atmospheric region from the earth's surface to three thousand feet where the air churns with turbulent eddies the average wind speed increasing with height The boundary layer wind tunnel mimics these windy marbled striations in order to test models of buildings and bridges that inevitably face the wind when built Over the years Davenport's revolutionary lab investigated and improved the wind worthiness of the world's greatest structures including the Sears Tower the John Hancock Tower Shanghai's World Financial Center the CN Tower the iconic Golden Gate Bridge the Bronx Whitestone Bridge the Sunshine Skyway and the proposed crossing for the Strait of Messina linking Sicily with mainland Italy Chronicling Davenport's innovations by analyzing select projects this popular science book gives an illuminating behind the scenes view into the practice of wind engineering and insight into Davenport's steadfast belief that there is neither a structure too tall nor too long as long as it is supported by sound wind science
