Test Methods for Explosives Muhamed Suceška, 2012-12-06 It seems that there is no book that treats the measurement of the physical parameters of explosives as its only subject although limited information is available in a number of books Therefore I have tried to bridge this gap in the literature with this book A large number of various physical parameters have to be determined experimentally in order to test or characterise an explosive Various physical principles have been applied for such measurements Accordingly a large number of different experimental methods exist as well as various testing apparatuses and procedures On the other hand great progress has been made recently in the study of detonation phenomena New measuring techniques can assess extremely short processes to below nanoseconds scale They make it possible to determine important parameters in detonation physics I have made a great attempt to cover the available literature data on the subject Because it would be a highly demanding task to include in a single volume all the methods that are in use by various testing agencies I have tried to give primarily the principles for determination of individual physical parameters of explosives by different measuring methods as well as data treatment procedures

Daniela E. Casartelli, Silvio Cruschina, Pekka Posio, Stef Spronck, 2023-09-05 Sentence 1 represents the phenomenon of reported thought 2 that of reported speech 1 Sasha thought This is fine or Sasha thought that this would be fine 2 Sasha said This is fine or Sasha said that this would be fine While sentences as in 1 have often been discussed in the context of those in 2 the former have rarely received specific attention This has meant that much of the semantic and structural complexity cross linguistic variation as well as the precise relation between 1 and 2 and related phenomena have remained unstudied Addressing this gap this volume represents the first collection of studies specifically dedicated to reported thought It

introduces a wide variety of cross linguistic examples of the phenomenon and brings together authors from linguistic typology corpus and interactional linguistics and formal and functional theories of syntax to shed light on how talking about thoughts can become grammar in the languages of the world The book should be of interest to linguists philosophers of language linguistic anthropologists and communication specialists seeking to understand topics at the boundary of stylistics and morphosyntax as well as the grammar of epistemicity **The Modern Language Journal** ,1922 Includes section Reviews *The Engineer* ,1894
