Greenwood,Thomas M. McMillan,Michael P.

Barnes,Christopher D. Ward,2005-08-16 Changes in the focus of neurological practice worldwide have led to the need for new standard texts that reflect the current state of this expanding area of clinical expertise The second edition of the Handbook of Neurological Rehabilitation is a major reference source that fulfils this need providing an invaluable resource for all professions that work with patients suffering from neurological disorders It brings restorative neurology to the bedside

and shows how a reiterative goal oriented problem solving training programme can benefit patients sometimes on a scale not achieved by pharmacological or surgical interventions The book is divided into three sections all of which have been updated Section One explores the clinical and biological principles underpinning rehabilitation practice in the context of neurological disablement Section Two describes the assessment treatment and management of the major physical cognitive and behavioural impairments and the resulting functional deficits that may follow or accompany neurological disease The final section explores in more detail these problems and their management in relation to the more common specific disorders of the nervous system The text emphasises the fact that rehabilitation is an ongoing process involving multidisciplinary problem solving goal setting and education in which organised care is more effective than unorganised care and the breakdown of professional barriers within rehabilitation to facilitate the use of combined treatment techniques improves outcome It describes the contribution made by neural reorganisation and compensatory mechanisms to recovery of function focuses on the avoidance of secondary deficit and explores the physical cognitive affective and behavioural problems that may occur after neurological damage At a time when new medical technologies threaten to fragment the integrity of medical care at individual and societal levels it is crucial that all those involved in the management of chronic neurological disease have a working knowledge of the contents of this book Their perspective on clinical practice will then be truly integrated and holistic and their patients will benefit accordingly
