**Particle Astrophysics and Cosmology** M.M. Shapiro, Rein Silberberg, John P. Wefel, 2012-12-06 Proceedings of the NATO Advanced Study Institute Erice Sicily Italy June 20 30 1992 *String Theory and Fundamental Interactions* Maurizio Gasperini, Jnan Maharana, 2007-11-08 This book has been prepared to celebrate the 65th birthday of Gabriele Veneziano and his retirement from CERN in September 2007 This retirement certainly will not mark the end of his extraordinary scientific career in particular he will remain on the permanent staff of the Collège de France in Paris but we believe that this important step deserves a special celebration and an appropriate recognition of his monumental contribution to physics Our initial idea of preparing a volume of Selected papers of Professor Gabriele Veneziano possibly with some added commentary was dismissed when we realized that this format of book very popular in former times has become redundant today because of the full digitalization of all important physical journals and their availability online in the electronic archives We have thus preferred an alternative and unconventional but probably more effective form of celebrating Gabriele's birthday a collection of new papers written by his main collaborators and friends on the various aspects of theoretical physics that have been the object of his research work during his long and fruitful career *Sammlung* Alberto Giovannini, 2000 This important volume describes the wide ranging scientific activities of Leon Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents The reprinted papers are grouped by topic starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics Van Hove's career as teacher director and science advisor in many European institutions is presented in sketches by friends and coworkers A selection of his speeches and documented thoughts on science completes the volume

**The Future of Theoretical Physics and Cosmology** G. W. Gibbons, E. P. S. Shellard, S. J. Rankin, 2003-10-23 Based on lectures given in honour of Stephen Hawking's sixtieth birthday this book comprises contributions from some of the world's leading theoretical physicists It begins with a section containing chapters by successful scientific popularisers bringing to life both Hawking's work and other exciting developments in physics The book then goes on to provide a critical evaluation of advanced subjects in modern cosmology and theoretical physics Topics covered include the origin of the universe warped spacetime cosmological singularities quantum gravity black holes string theory quantum cosmology and inflation As well as providing a fascinating overview of the wide variety of subject areas to which Stephen Hawking has contributed this book represents an important assessment of prospects for the future of fundamental physics and cosmology **Physics Briefs**, 1993 **Literature 1992, Part 1** Astronomisches Recheninstitut, 2013-11-11 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended

material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world

*Gravitational Dynamics* Ofer Lahav, Elena Terlevich, Roberto Terlevich, 1996-07-13 Gravity plays a central role in the dynamics of all astrophysical systems from stars to the Universe as a whole This timely volume examines all aspects of gravitational dynamics from stellar systems and galaxy disks to the dynamics of the Local Group large scale structures and motions galaxy formation and general relativity Each chapter is written by a world expert renowned for original contributions to the field The authors are James Binney Roger Blandford David Burstein Tim de Zeeuw George Efsthathiou Steve Gull Nick Kaiser J Katz Donald Lynden Bell Ruth Lynden Bell Douglas Lin Jeremiah Ostriker T Padmanabhan J Papaloizou Jim Peebles Jim Pringle Martin Rees Maarten Schmidt Scott Tremaine and Simon White This volume provides a broad pedagogical introduction to gravitational dynamics for graduate students and an up to date review for researchers in cosmology astrophysics mathematical physics and applied mathematics

**Gamma-ray Astronomy** P. V. Ramana Murthy, A. W. Wolfendale, 1993-04 The recent launch of NASA's Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy

*The Vanishing Universe* Derek McNally, Unesco, 1994-09 What is the future of observational astronomy The effect on astronomy of environmental degradation from electromagnetic pollution to near Earth space debris and the broader implications of jeopardising this science are explored in this provoking review Astronomy is acutely vulnerable to environmental pollution This survey demonstrates unequivocally the destructive impact of civilisation on current observational astronomy and its future International astronomers discuss the source and effect of electromagnetic pollution from optical to radio wavelengths and space debris Together with specialists from industry law and elsewhere they go on to outline possible remedies and the legislation required for successful international regulation of the pollutants These articles offer an authoritative survey of the pollutants and the steps necessary to regulate them They provide an essential reference for the professional astronomer environmentalist and concerned non specialist
