Snorkel Immersions In Time:

Snorkel Louis A Galiano, 2006 within our present all times exist including every decision we will make or have made our past our deaths There is no time only the illusion of time and what remains has already been and what has been will be Sixty five year old management consultant Len Giardia is disenchanted Once considered a prodigy in his childhood he now reflects that his life has not turned out quite as he expected His marriage has failed he has become disgusted with his job and he is constantly annoyed by his neighbors and business associates His only solace comes from the occasional snorkeling trip to the Caribbean Islands But Len has developed a peculiar concept that may offer a solution he concludes that time operates in a circle and that as a result of its circuitousness it may contain specific connections by which events can be controlled and changed In the meantime he falls in love with a young Mexican girl And by his own theories he may have become a murderer but only time can provide the answer Poetically written Snorkel Immersions in Time is the story of one man's redemption as he seeks purpose in his life among the natives of a coastal Yucatan village

Refining and Casting of Steel Karel Gryc, Jan Falkus, 2020-11-09 Steel has become the most requested material all over the world during the rapid technological evolution of recent centuries As our civilization grows and its technological development becomes connected with more demanding processes it is more and more challenging to fit the required physical and mechanical properties for steel in its huge portfolio of grades for each steel producer It is necessary to improve the refining and casting processes continuously to meet customer requirements and to lower the production costs to remain competitive New challenges related to both the precise design of steel properties and reduction in production costs are

Fundamentals of Dimensional Analysis Alberto N. Conejo, 2021-05-31 This is the first book which systematically describes an integral approach on dimensional analysis The amount of textbooks on dimensional analysis is huge however most of the books start with the definition of the relevant variables When the variables are given to the reader without prior knowledge on each problem it has serious consequences the usefulness of dimensional analysis is not appreciated is not possible to understand the real challenges of this subject and the result which is a general relationship with dimensionless groups is useless This book closes the hole in previous books because in addition to describe step by step how to reach the general relationship with dimensionless groups which creates solid basis of different metallurgical problems to understand the role of the relevant variables It provides a full description on how to obtain the experimental data and applies the experimental data to transform the general relationship in a particular solution Once the reader learns how to design the experimental work and uses that information to define the particular solution it is possible to asses if the selection of variables was adequate or not The book is useful for both undergraduate and graduate students **Steelmaking Conference Proceedings** ,1993
