Terrestrial Slugs Biology Ecology And Control:

Terrestrial Slugs A. South, 1992 This is the definitive reference work on the biology of terrestrial slugs It covers their anatomy physiology ecology behaviour life cycles slugs as transmitters of disease slug crop damage and the control of slug pests It contains an extensive bibliography

Terrestrial Slugs A. South, 2012-12-06 In recent years slugs have become increasingly important partly because several species are agricultural and horticultural pests and partly because they have proved to be useful experimental animals particularly in the field of neurophysiology Most of the early works which included slugs were essentially taxonomic but the book by Taylor 1902 1907 contained a great deal of biological information about slugs some of which is still relevant today The publication of the book by Runham and Hunter 1970 represented a milestone in slug research providing a comprehensive survey of current knowledge about slugs The book by Godan 1983 on snails and slugs was mainly concerned with the economic importance of these animals The purpose of the present book is to present a review of current knowledge of the biology and ecology of slugs together with their status and control as pests Although relatively little is known about the biology and ecology of tropical slugs and most information is taken from work on European slugs the European pest species have become widely distributed throughout temperate regions and this book should be of interest world wide It is written as a source of information for people seeking to control slug pests and also for those wishing to use slugs for research or teaching purposes The book is intended particularly to provide a starting point for those beginning research on slugs and an extensive bibliography has been provided

Molluscs as Crop Pests G. M. Barker, 2002-03-21 Mollusc species currently constitute a major threat to sustainable agriculture This threat is associated with cultivation of new crops

intensification of agricultural production systems and the spread through human trade and travel of species adapted to these modified environments In some crops their significance is only now becoming apparent with the decline in the importance of other pest groups which can be effectively controlled The book focuses on toxicology of chemicals deployment of molluscicides in baits specific crop situations worldwide current pest status of mollusc species and progress towards development of solutions
