Mammals and Birds as Bioindicators of Trace Element Contaminations in Terrestrial Environments Elżbieta Kalisińska, 2019-03-01 The population explosion that began in the 1960s has been accompanied by a decrease in the quality of the natural environment e g pollution of the air water and soil with essential and toxic trace elements Numerous poisonings of people and animals with highly toxic anthropogenic Hg and Cd in the 20th century prompted the creation of the abiotic environment mainly in developed countries However the system is insufficient for long term exposure to low concentrations of various substances that are mainly ingested through food and water This problem could be addressed by the monitoring of sentinels organisms that accumulate trace elements and as such reflect the rate and degree of environmental pollution Usually these are long lived vertebrates herbivorous omnivorous and carnivorous birds and mammals especially game species This book describes the responses of the sentinels most commonly used in ecotoxicological studies to 17 trace elements

Physics of the Terrestrial Environment, Subtle Matter and Height of the Atmosphere Eric Chassefiere, 2021-09-21 The discovery in the middle of the 17th century of both the weight of air and the law governing its elasticity transformed the status of the atmosphere from that of a purely mathematical object to that of a complex and highly variable physical system In the context of rapidly intensifying experimentation and observation the nature of the atmosphere was therefore the subject of a host of hypotheses which 18th century scholars tried to reconcile with a coherent physical approach In particular this was achieved by the conceptualization of invisible or subtle materials thought to be closely linked to atmospheric stratification Subtle matter was introduced largely to reconcile contradictory results concerning the estimation of the height of the atmosphere These estimations were based on different methods mainly using the observation of meteors and the refracted and reflected light of stars Taking as its common thread the question of the height of the atmosphere which was omnipresent in the texts at the time this book traces the history of the discovery of the atmosphere and the many questions it generated
