Nairne, 2011-12-06 The Foundations of Remembering presents a collection of essays written by top memory scholars in honor of Henry L Roediger III The chapters were originally delivered as part of the Roddyfest conference

held in March 2005 to celebrate Purdue University's awarding of an honorary doctor of letters to Roediger in recognition of his many contributions to the field of psychology. Authors were given a simple charge: choose your own topic but place your work in historical context. Roediger is fascinated by the intellectual lineage of ideas so addressing historical foundations seemed a fitting tribute. The chapters contained in this volume help to establish the foundations of remembering circa the first decade of the 21st century as perceived by some of the leading memory researchers in the world. Not surprisingly each of the chapters touches on Roediger's research as well largely because his work has helped to define and clarify many topics of interest to the memory field. *The Foundations of Remembering* is intended for a wide audience: students, scholars, and anyone interested in exploring the historical and conceptual roots of modern memory theory. *Differing Perspectives in Motor Learning, Memory, and Control* D. Goodman, I.M. Franks, R.B. Wilberg, 1985-01-01. *Differing Perspectives in Motor Learning, Memory, and Control* **DHEW Publication No. (OE).**, 1974. *Developing and Validating Test Items* Thomas M. Haladyna, Michael C. Rodriguez, 2013-07-18. Since test items are the building blocks of any test, learning how to develop and validate test items has always been critical to the teaching/learning process. As they grow in importance and use, testing programs increasingly supplement the use of selected response multiple choice items with constructed response formats. This trend is expected to continue. As a result, a new item writing book is needed: one that provides comprehensive coverage of both types of items and of the validity theory underlying them. This book is an outgrowth of the author's previous book, *Developing and Validating Multiple Choice Test Items* 3e Haladyna 2004. That book achieved distinction as the leading source of guidance on creating and validating selected response test items. Like its predecessor, the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs, especially when these items are delivered in a computer-based environment. Key features include: Comprehensive and Flexible. No other book so thoroughly covers the field of test item development and its various applications. Focus on Validity. Validity, the most important consideration in testing, is stressed throughout and is based on the Standards for Educational and Psychological Testing, currently under revision by AERA, APA, and NCME. Illustrative Examples. The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item-generating methods are also presented. Based on Theory and Research. A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors. *Learning & Memory* John H. Byrne, 2003. Contains alphabetically arranged articles that provide information on key topics in learning and memory, written by experts in the field and includes biographical sketches of notable individuals now deceased who have contributed to the understanding of learning and memory. **Resources in Education**, 1994-08. **Cognitive Modeling in Perception and Memory** J. G. W. Raaijmakers, Robert Goldstone, Mark Steyvers, Amy Criss, Robert Nosofsky, 2015-02-11. The work of Richard M.

Shiffrin has highly impacted the field of cognitive science and current developments within perception and memory have been influenced by his ideas In this volume several key figures in the field will comment on these developments and put them in a wider perspective Although many theories and models have been presented in recent years for various aspects of human cognition there have not been many comparative evaluations that focus on how these models have really advanced our understanding of the underlying mechanisms This volume will be a valuable source of information for both cognitive scientists working in the field and researchers and students looking for a clear accessible presentation of the key problems in cognitive science Highlighted sections include attention and perception memory functions and processes knowledge representation and semantics modelling approaches and applications
