*Approach* Pankaj Mehra, Benjamin W Wah, 1995-04-26 This book presents a system that learns new load indices and tunes the parameters of given migration policies The key component is a dynamic workload generator that allows off line measurement of task completion times under a wide variety of precisely controlled loading conditions The workload data collected are used for training comparator neural networks a novel architecture for learning to compare functions of time series and for generating a load index to be used by the load balancing strategy Finally the load index traces generated by the comparator networks are used in a population based learning system for tuning the parameters of a given load balancing policy Together the system constitutes an automated strategy learning system for performance driven improvement of existing load balancing software Electric Railway Journal ,1910 The Street Railway Journal ,1910 Emerging Trends in Electrical, Communications, and Information Technologies T.
