A narrative approach to mental health in general practice

John Launer

There is a tension between the complex narrative that a patient brings into the consulting room and a doctor's understanding of what is really going on as formulated in a diagnosis or an idea about pathology. Which is a "truer" account of reality: the patient's or the doctor's? Can both be true? If so, how?

These questions are particularly relevant in mental health care for a number of reasons. Firstly, sociology and ethnography have identified psychiatry alone among the medical specialties as peculiarly culture bound.¹⁻³ Secondly, psychiatry lies in an uncomfortable no man's land between conventional medical science and the search for meaning which may extend into political and religious domains.⁴ Thirdly, mental health professionals often use confusing and contradictory language to describe their observations. When compared with the babel of explanatory models which often seem to disqualify each other or which may simply be a way of asserting the therapist's power, the patient's own story may gain in authority and seem rather than the professional's version.⁵ Finally, psychiatry is the only area of specialist medicine in which talking and listening are explicitly understood to be therapeutic.⁶

The narrative approach in mental health

In a book on the use of narrative in family therapy, Papadopoulos and Byng-Hall point out an important change in the understanding of what the "talking cure" actually involves: clinicians from many different therapeutic schools are moving away from the search for a normative explanation of someone's problems and towards the search for an appropriate new story for each patient. This change has its origins in modern and "postmodern" intellectual movements, including cybernetics and structuralism.⁷ For example, the influential American therapists Anderson and Gendishman argue for the need to abandon paradigmatic models that test the patient's experience against some predetermined view of normality.⁸ They propose using an approach that acknowledges the client as an expert and which can facilitate any possible account of reality, provided that it makes sense in the client's eyes. Similarly, Barck refers to selfhood as something to be produced rather than discovered.⁹ What all these ideas have in common is that the conversation between clinician and client can no longer be regarded as a tool for seeking out hidden truths. Instead, it should be seen as a means of creating previously unformulated truths.

Is there any place in this anarchic, postmodern universe for facts or professional expertise? Are we not in danger of alienating our psychiatric patients, who surely come to us looking for certainties rather than deconstructions? Many mental health professionals share the dilemma which has been exposed as being at the heart of our work: how do we hold on to our theories and beliefs while allowing the patient's story its full

Summary points

The success of "talking cures" depends on their ability to give coherence to the client's experience of physical or mental illness and to enable the construction of a narrative of healing or coping.

The narrative approach to mental health is concerned with the question of how a patient and clinician working together can construct a story that makes sense.

In general practice doctors may make useful contributions to patients' stories although these contributions should not be seen as a superior "truth".

opportunity to evolve, even if it does so in directions we might neither expect nor wish.¹⁰⁻¹²

Using narrative in general practice

I am mainly a general practitioner but I have a special interest in opportunities for mental health work in general practice and teaching.¹³⁻¹⁵ In my clinical work I am aware of narrative in three of its aspects:

- In the familiar role of taking a traditional medical history¹⁶;
- In counselling, as something that needs to be listened to, to allow patients to give coherence to their own history¹⁷; and
- As a therapeutic stance which involves questioning the patient in a way that explores new meanings which may make a difference to the patient.¹⁸

I will address this last aspect in discussing the cases that follow. These cases were selected somewhat at random: they are the stories of the first three patients
