

G.M. Harwood & D.B. Smith

This volume is the printed record of EZ 82, a workshop on the results of recent research on strata of the English Zechstein and related topics. The workshop comprised a six-day field study meeting on Permian rocks at outcrop in north-east England and a three-day indoor discussion meeting in the Department of Geology at the University of Nottingham. Twenty-one research and review papers were presented at this meeting. Most of these were written up for this volume which has been further supplemented by the inclusion of papers submitted by two Polish workers who were unable to attend the workshop.

The field meeting commenced with visits to the classic exposures of Upper Permian reef-margin and slope carbonate rocks in County Durham and adjoining areas and continued to exposures of nearshore and shelf carbonates and continental sediments in Yorkshire, Derbyshire and Nottinghamshire. A guide to the exposures visited, which also included background information on their stratigraphical, environmental and palaeogeographical significance, was prepared for the participants; copies of this guide may be obtained from The Secretary, Department of Geology, The University of Nottingham, Nottingham NG7 2RD (1986 price £3.50 including postage).

The pattern of the workshop was based on that of a highly successful meeting of Zechstein workers in Poland in 1978 (Depowski *et al.* 1981) at which the growing school of Polish workers, amongst others, presented their research results to an international audience with research interests in the Upper Permian. About the same time, the discovery, possible sourcing potential, plus exploitation of hydrocarbons in Zechstein strata in Poland, Denmark, Germany, The Netherlands, England and the southern North Sea had stimulated Fuchtbauer & Peryt (1980) to put together a collection of papers dealing primarily with Zechstein carbonate rocks (*Contr. Sedim.* 9, 1980). A steady trickle of papers on many aspects of the nature and evolution of Permian strata in Europe, together with the processes that shaped them, was also appearing in other journals, providing further evidence of increased interest in these sometimes enigmatic rocks. The EZ 82 workshop brought together both Zechstein workers from many parts of Europe plus researchers who were working on similar carbonate-evaporite basins from the USA to the

USSR, a combination which created a lively discussion meeting.

In a volume dealing with so many diverse aspects by many authors we claim no unifying theme than that of relevance to the Zechstein. We have divided the papers herein on a geographical basis, with papers 2–11 dealing primarily with topics within the United Kingdom, papers 12–15 within Germany and papers 16–21 within Poland with the final contribution, paper 22, describing Upper Permian sediments from the Urals. Within each geographical section the papers are presented, as far as is possible, in stratigraphical order.

The first section, United Kingdom papers, commences with revision of nomenclature for the Upper Permian strata in eastern England (Smith, Harwood, Pattison and Pettigrew). This revision has been thought necessary for some time, particularly as strata in different Zechstein cycles had similar, or confusing, nomenclature in different areas of eastern England. The EZ 82 workshop provided the impetus to produce a revised nomenclature, which is detailed here and includes definitions and type localities.

The remaining papers in the United Kingdom section are mostly concerned with carbonate strata at, or near, outcrop within eastern England. One exception is the paper by Turner and Magaritz, who have carried out detailed mineralogical, chemical and stable isotope analyses on one core from the Marl Slate, taken just offshore of County Durham. They detail a close correlation between lithological and geochemical parameters, including stable isotope values. Sapropelic units, at the base of sub-cycles within the Marl Slate, are characterized by high contents of iron, quartz silt and organic carbon with strongly negative oxygen isotope values. Turner and Magaritz conclude these are indicative of freshwater influxes which promoted productivity, water stratification and regional anoxic conditions, thus forming the base of each sub-cycle. They also conclude that the increase in base metals (notably copper and zinc) away from the sapropelic units indicates these metals to be more associated with the marine conditions re-established in the upper parts of each sub-cycle.

The English Zechstein and Related Topics Gill M. Harwood, Denys Barker Smith, 1986 **Cross Border Themes in Petroleum Geology I: The North Sea** S. Patruno, S. G. Archer, D. Chiarella, J. A. Howell, C. A.-L. Jackson, H. Kombrink, 2022

A cross border approach to exploration appraisal and development is important in mature basins such as the North Sea where the low hanging fruit have long gone. This approach emphasizes the need to see the basin as one geological entity in order to maximize economic recovery and prepare the area for the energy transition. This volume offers an up to date geology without borders view of the stratigraphy sedimentology tectonics and oil and gas exploration trends of the entire North Sea basin along with the challenges associated with differences in data continuity and nomenclature across median lines. This volume includes overviews of cross border play statistics lithostratigraphic naming conventions and exploration performance through to new facies models for cross border areas. As such this volume will be a valuable reference for every geoscientist working in the North Sea for years to come.

Marine Permian of England D.B. Smith, 2013-03-07. This book is concerned almost wholly with a diverse suite of carbonate rocks that were formed near the margins of shallow tropical seas during the last 5-7 million years of the Permian period 300-251 Ma. These unique rocks collectively known as the Magnesian Limestone have been studied for more than 160 years and the names of some of the early workers Geinitz Murchison Phillips Sedgwick Sorby would grace any geological hall of fame. Despite this formidable assault and the efforts of a host of later workers the Magnesian Limestone still retains many of its secrets. Permian marine rocks crop out on both sides of the Pennines but those of the Zechstein Sea to the east are by far the thicker and more varied and in these lie all but one of the sites selected for special protection. Detailed accounts of the rocks in 26 such sites form about half of this book and the normal and special features of these sites are compared contrasted and placed in their mutual context in the remainder of the book. The sites were selected according to a range of criteria including uniqueness representativeness historical importance and suitability for teaching purposes and research. Most are inland quarries but a few are in the unrivalled coastal cliffs of classical County Durham where the main difficulty lies in deciding what not to select.

Palaeozoic Climate Cycles A. Gąsiewicz, M. Słowakiewicz, 2014-02-03. This volume presents results of a variety of case studies documenting the Late Palaeozoic climate changes and cyclicity of deposition. The collected papers cover many aspects related to palaeoenvironmental analysis with sedimentological stratigraphic palaeobiological geochemical and palaeomagnetic studies of the fossil record around the Late Palaeozoic Ice Age and soon after. They span a stratigraphic interval from Carboniferous to Permian Triassic transition around the world. This book comprising results for a range of disciplines is a valuable source for not only researchers who are actively working on specific aspects of the Late Palaeozoic and looking for an up to date reference on this inhospitable time in the Earth's history. It is also of interest to climate modellers and the wider scientific community with an interest in the latest research on the decline of the Palaeozoic World.

Petroleum Geology of the North Sea K. W. Glennie, 2009-06-29 Since the 3rd edition of this publication emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources This change is reflected in this new 4th edition which has been significantly expanded to accommodate additional material The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea

of Karst Terrains Barry F. Beck, J. Gayle Herring, J. Brad Stephenson, 2020-12-18 Engineers from around the world recount in this volume their successes and failures in attempting to deal with unique and quixotic landscapes *Petrology of the Sedimentary Rocks* J. Greensmith, 2012-12-06 In the 75 years of the existence of this book the content and boundaries of sedimentary petrology have increased enormously It is doubtful if there are any areas of the subject described by the original authors which have remained untouched by the relatively recent onslaught by countless sedimentologists aided by a veritable armoury of sophisticated techniques Particular areas have always waxed and waned in popularity and some subjects such as heavy mineral studies which have been successively popular then unpopular appear of late to have had a new lease on life The development and application of relatively old techniques but now used in a sedimentological context often brings an upsurge and revival of interest in some rocks Isotope work has now become an integral part of the study of pelagic and phosphatic sediments and carbonate cements An understanding of burial diagenesis a much neglected area is slowly coming to the fore as electron microscopes and X rays delve into the mineralogical and textural complexities of ancient sediments Yet despite the zapping of minerals with electron beams and generating gases to pass into a mass spectrometer to paraphrase an erstwhile research student of mine the danger of this approach is that materials are analysed with scant regard to field relationships or petrographic control thus much genetic information is missing when interpretations are attempted Petrography is far from being archaic
