Protecting future generations through commons Saki Bailey,Gilda Farrell,Ugo Mattei,2014-01-09 The recent austerity measures currently adopted in numerous European countries assume that a rise in public debt should automatically result in cuts to social programmes and the privatisation of inefficiently managed resources This type of reasoning is being used to justify the destruction of social rights of citizens for the profit of the private sector resulting in more limited access to the most fundamental resources such as water nature housing culture knowledge and information mainly for the most vulnerable members of society Such a view informed solely by short term growth and profit cycles is endangering access to those resources not only for current generations but for future ones as well This book is an attempt to go beyond liberal approaches to intergenerational and distributive justice It emphasises the role of commons and communities of the commons driven by the desire to defend and perpetuate those fundamental resources under the threat of expropriation by the state and the market This book also offers policy makers and citizens who wish to accept their political responsibility by being active

and refusing corporate ideology some best practices as well as methods and solutions for renewing the configurations of societal relationships through commons thereby integrating the interests of future generations in the European Community's decision making processes and institutions This is a contribution by the Council of Europe and the International University College of Turin to the protection of the dignity of every person especially of those who even though unable to enjoy existing social rights have the right to benefit from choices and policies that ensure that human life remains unspoiled *A Brighter Future* Richard Holt, Daphne Greenwood, 2014-12-18 As the United States continues its slow climb out of the Great Recession it is important to focus on new directions to improve the standard of living in America This book explores what is behind a faltering standard of living in the United States since the early 1980s and what can be done to restore it The book is uniquely valuable in going beyond mainstream thinking about how to restore prosperity Economics has traditionally equated economic growth increases in per capita income with improvements in quality of life and the standard of living This book questions that assumption The different chapters in the book show the standard of living as being more than income to include many non market aspects such as access to public goods roads clean air and water schools parks and museums intangible aspects of quality of life such as equity and a sense of community and broadly based economic opportunities This means that improving the standard of living is a multi dimensional challenge rather than one of solely increasing aggregate demand productivity or GDP This book embodies a pluralistic approach and draws on the expertise of a wide array of thinkers The intended audience is for various courses offered in economics sociology political science public policy programs and in environmental and ecological studies **Future Tourism Trends Volume 1** Canan Tanrisever, Hüseyin Pamukçu, Anukrati Sharma, 2024-01-22 The world is entering the Third Millennium in which great changes are expected in all areas of human interest life and activity These changes have been brought on by past and present man made events which have had both positive and negative consequences The coming millennium will be marked by significant social political demographic and technological changes and will definitely differ from the last century The future will bring more leisure time a higher standard of living and a better quality of life for us all Future Tourism Trends examines recent and the most probable changes and answers questions such as Who is the new tourist if there is one and what is she looking for Is the new post technological era transforming the very essence of travelling The authors present a wide range of visionary insights as well as operational takeaways **The Power of Natural Gas Hydrate: Unlocking a Clean Energy Future** Pasquale De Marco, Natural gas hydrates NGHs also known as fire ice are crystalline compounds composed of water and methane molecules found in both permafrost regions and beneath the world's oceans These unique substances hold immense energy potential estimated to be several times greater than those of conventional natural gas Harnessing the power of NGHs could revolutionize the global energy landscape Their widespread availability and potential for cost effective production offer a path towards energy security and affordable reliable energy for communities worldwide Moreover NGHs have the potential to significantly reduce

greenhouse gas emissions compared to traditional fossil fuels contributing to a cleaner more sustainable energy future. However, unlocking the full potential of NGHs requires overcoming significant challenges. Scientists and engineers are working diligently to develop safe and efficient extraction technologies, while policymakers and industry leaders collaborate to establish regulatory frameworks that promote responsible NGH development while protecting the environment.
