*Essential Hypertension and Its Causes* Paul I. Korner, 2007-05-11 Essential hypertension EH is the most common type of high blood pressure and is responsible for much death and serious illness which has been the reason for the huge research effort to determine its causes However countless scientific articles still keep proclaiming that the causes of essential hypertension remain unknown In view of the number of publications that descend on the hypertension specialist like a waterfall such proclamations seem to overlook the considerable amount of knowledge that we already have about the etiology of EH The problem may be a lack of synthesis rather than a lack of information This book brings together some of this knowledge into a coherent and clinically relevant account about the pathogenesis of EH With an extremely broad reach this book aims to give a balanced view of the causes of

EH its neural genetic and environmental causes      *Fuhrman & Zimmerman's Pediatric Critical Care E-Book* Jerry J. Zimmerman, Alexandre T. biology meets this need by combining genomic knowledge with theoretical experimental and computational approaches from a number of traditional scientific disciplines to create a mechanistic explanation of cellular systems and processes Systems Biology I Genomics and Systems Biology II Networks Models and Applications offer a much needed study of genomic principles and their associated networks and models Written for a wide audience each volume presents a timely compendium of essential information that is necessary for a comprehensive study of the subject The chapters in the two volumes reflect the hierarchical nature of systems biology Chapter authors world recognized experts in their fields provide authoritative discussions on a wide range of topics along this hierarchy Volume I explores issues pertaining to genomics that range from prebiotic chemistry to noncoding RNAs Volume II covers an equally wide spectrum from mass spectrometry to embryonic stem cells The two volumes are meant to provide a reliable reference for students and researchers alike **Pediatric**

Xinran Ma,Lingyan Xu,Yan Lu,Dechun Feng,Nuo Sun,Jiqui Wang,2024-02-08 This Research Topic is part of the Novel  
Strategies Targeting Obesity and Metabolic Diseases series Volume I The 21st century features excessive food availability  
and prevalent sedentary lifestyle Unsurprisingly obesity has become one of the most serious problems threatening public  
health with a staggering morbidity mortality rate Obesity is the leading risk factor for a series of metabolic diseases i e  
diabetes cardiovascular disease hypertension non alcoholic hepatic steatosis osteoporosis and certain types of cancer  
Although theoretically body weight could be easily controlled by the balance of food intake and caloric burning the rapid and  
stressful pace of modern society has made the healthy life style of eating less and exercising more hard to achieve its  
popularity Pharmacotherapeutic solutions targeting appetite or energy expenditure are limited and often with undesired and  
sometimes dangerous side effects The problem becomes even more complicated when genetic susceptibility for obesity is  
taken into account In result till now the long and intense battle for obesity intervention still wages and we are in urgent need  
for effective weight losing strategies      **Systems Genetics of Human Complex Diseases - Volume II** Guiyou Liu,Qinghua

Myocardial Injury H.M. Piper,2012-12-06 In industrialized countries ischemic heart disease is by far the most common organ  
specific cause of death The thrombotic occlusion of a coronary artery which had previously been severely altered by  
atherosclerosis is the most frequent cause of ischemic deterioration of myocardial tissue i e myocardial infarction Death of  
the human individual occurs when myocardial ischemia causes a critical impairment of cardiac pump function The failure of a  
heart with an ischemic area may be due to the amount and location of contractile tissue becoming paralyzed or even necrotic  
or to arrhythmias provoked by the ischemic condition or by a combination of both factors Considerable progress has been  
made in the development of antiarrhythmic therapy Effective tools have been developed to reperfuse ischemic myocar dial  
tissue as soon as the patient reaches hospital However therapeutical principles for the ischemic reperfused myocardium  
which would specifically interfere with the state of injury of the ischemic tissue at the onset of reperfusion and avoid the  
apparent hazards of the reperfusion process itself have yet to be established But not only approved therapeutical concepts  
are lacking the pathophysiology of myocardial cell injury in pro gressive ischemia and under reperfusion is in itself only
