SKELETAL SYSTEM

THE FRAMEWORK OF THE HUMAN BODY

Read the text below and then answer the questions.

The skeletal system, or skeleton, is made of bones, cartilage, ligaments, and ligaments. It is the framework of the human body. Its main function is to support the body and protect internal organs. It also provides a point of attachment for muscles, which allow movement. The skeleton is made of two parts: the skull, which protects the brain, and the rest of the body, which supports the body and protects internal organs.

Bones, the fundamental building blocks of the skeletal system, are made of a dense, hard material called bone. They are made of a hard, white, mineralized substance called bone. They are made of a hard, white, mineralized substance called bone. They are made of a hard, white, mineralized substance called bone.

Cartilage is a flexible, white, fibrous tissue that connects bones. It is found in the joints of the body, where it allows bones to move against each other. It is also found in the nose, ears, and other parts of the body. It is made of a hard, white, mineralized substance called bone.

Ligaments are bands of fibrous tissue that connect bones. They are found in the joints of the body, where they hold bones together. They are made of a hard, white, mineralized substance called bone.

The skeletal system is not a static entity but rather a dynamic and adaptive one. Throughout life, bones undergo a process called remodeling, where old bone is removed and new bone is formed. This process is controlled by hormones and other factors in the body.

The skeletal system is also involved in the production of blood cells. The bone marrow, which is found inside the bones, is the site where blood cells are produced. The bone marrow is made of a soft, white, fatty substance called bone marrow.

The skeletal system is also involved in the storage of minerals. Bones store calcium and phosphorus, which are essential for many functions in the body. The bone marrow is made of a soft, white, fatty substance called bone marrow.

The skeletal system is also involved in the regulation of the body's pH. Bones store bicarbonate ions, which are released into the blood when the body's pH is low. The bone marrow is made of a soft, white, fatty substance called bone marrow.

The skeletal system is also involved in the regulation of the body's energy balance. Bones store fat, which is used for energy. The bone marrow is made of a soft, white, fatty substance called bone marrow.
