Aslanov, Alexander Ledkov, 2012-10-16 Aimed at engineering students and professionals working in the field of mechanics of
space flight this book examines space tether systems one of the most forward thinking directions of modern astronautics The
main advantage of this technology is the simplicity profitability and ecological compatibility space tethers allow the execution
of various manoeuvres in orbit without costs of jet fuel due to the use of gravitational and electromagnetic fields of the Earth
This book will acquaint the reader with the modern state of the space tether s dynamics with specific attention on the
research projects of the nearest decades This book presents the most effective mathematical models and the methods used
for the analysis and prediction of space tether systems motion attention is also given to the influence of the tether on
spacecraft s motion to emergencies and chaotic modes Written by highly qualified experts with practical experience in both
the fields of mechanics of space flight and in the teaching Contains detailed descriptions of mathematical models and
methods and their features that allow the application of the material of the book to the decision of concrete practical tasks
New approaches to the decision of problems of space flight mechanics are offered and new problems are posed *Theory
and Applications of Multi-Tethers in Space* Panfeng Huang, Fan Zhang, 2019-11-18 This book offers a comprehensive overview
of recently developed space multi tethers such as maneuverable space tethered nets and space tethered formation For each
application it provides detailed derivatives to describe and analyze the mathematical model of the system and then discusses
the design and proof of different control schemes for various problems The dynamics modeling presented is based on Newton
and Lagrangian mechanics and the book also introduces Hamilton mechanics and Poincar surface of section for dynamics
analysis and employs both centralized and distributed controllers to derive the formation question of the multi tethered
system In addition to the equations and text it includes 3D design drawings schematic diagrams control scheme blocks and
tables to make it easy to understand This book is intended for researchers and graduate students in the fields of astronautics
