Native Host Plants for Texas Butterflies Jim Weber,Lynne M. Weber,Roland H. Wauer,2018-08-01 While many growers focus on attracting adult butterflies to their gardens fewer know about the plants that caterpillars need to survive Native host plants wildflowers trees shrubs vines grasses and sedges not only provide a site for the butterfly to lay its eggs they also provide a ready food source for the emerging caterpillar Think of these plants as the nurseries of the garden This user friendly heavily illustrated field guide describes 101 native larval host plants in Texas Each species account includes descriptive information on each plant a distribution map and photos of both the caterpillars and adult butterflies who frequent those plants An adult butterfly may nectar on a wide variety of flowers but caterpillars are much more restricted in their food sources Some feed on only a limited number of plant species so female butterflies seek out these specific plants to lay their eggs For example the host plants for Monarch caterpillars are various species of milkweed Often these plants are not the same as the ones the adult butterfly will later use for nectar Learning more about the plants caterpillars need is crucial for butterfly conservation Butterflies dependency on specific caterpillar host plants is one of the key factors restricting their range and distribution Armed with this knowledge readers can also hone their ability to find specific species of breeding butterflies in nature This is a handy guide whether you are in the field searching for butterflies or on the hunt for butterfly friendly options at your local plant sale

Gardening on the Dry Side of Texas Mary Irish,2025-05-30 Nearly three quarters of Texans live on the dry side of Texas the South and Central Texas expanse west of I 35 which includes the Rio Grande Valley north through San Antonio Austin and the Dallas Fort Worth area that receives fewer than 40 inches of rain annually In Gardening on the Dry Side of Texas Southwestern horticulturist Mary Irish presents a guide to the selection and care of plants that will be successful in these and other increasingly hot and dry conditions Gardening on the Dry Side of Texas opens with a section on garden design water conservation capture and management and how plants cope in drought conditions The heart of the book is 180 plant species included for their hardiness in Texas even amid the challenges of a changing climate with longer and hotter summers more erratic and less reliable rainfall and increasingly costly and scarce water These plants have low to moderate water needs and grow well in both the hot and cold conditions of the region Most are native plants with special consideration to those that are also reasonably available to the public Many of the species presented will also be useful in the prairie and desert areas of West Texas and beyond making Gardening on the Dry Side of Texas a valuable resource for gardeners looking to work with their local climate instead of against it

Texas Trees Paul W. Cox,Patty Leslie,1988 Describes 120 trees from among 46 species in Texas and includes black and white sketches of each tree and its leaf system

Native Host Plants for Texas Moths Lynne M. Weber,Jim Weber,2022-08-24 While day flying butterflies have long captured the attention of nature enthusiasts moth species

outnumber butterfly species by about fifteen to one with many being overlooked due to their mostly nocturnal habits. Although they are far less noticeable to us, moths are essential to many other species including the plants they pollinate and the animals they nourish. In their caterpillar or larval form, they provide a primary source of sustenance for birds, and as adults, they feed everything from tiny bats to large mammals. Native plants are of utmost importance for moths as they evolved alongside them, and they are the principal factor for dictating moth species range and distribution. Like butterflies, moths require native plant species they recognize in order to lay their eggs. This user-friendly, heavily illustrated follow-up to Lynne and Jim Weber's highly successful *Native Host Plants for Texas Butterflies* describes over 100 native larval host plants for moths in Texas. More than 150 moth species are illustrated in the book, both larval and adult phases, with one to two species for each of the larval host plants. Today, there are about 4,700 species of moths recognized in Texas, with new species and their host plant associations still being discovered. *Native Host Plants for Texas Moths* will prove to be an informative introduction to this less widely known world of moths and their host plants, providing a better understanding of how to discover, support, and protect these important insects.

[Texas Master Naturalist Statewide Curriculum](#) Michelle M. Haggerty, Mary Pearl Meuth, 2019-04-23

For fifteen years, the Texas Master Naturalist program has been hugely successful, training more than 9,600 volunteers who have given almost 2.8 million hours to nature education. This dedicated corps of naturalists provides teaching, outreach, and service in their communities, promoting the appreciation and stewardship of natural resources and natural areas around the state. Hundreds of new volunteers are trained every year, and the Texas Master Naturalist Statewide Curriculum serves as the basis of instruction for trainees who complete a certification course taught under the auspices of more than forty program chapters. The curriculum contains twenty-four units of instruction that range from geology to ornithology to wetland ecology, all written by the state's top scientists and experts. Available as well to educators, interpreters, and others who may not yet be able to commit to the Texas Master Naturalist program, the curriculum offers an authoritative source of information for anyone seeking to learn more about the natural world in Texas.
