Sleepy and Busy Animals Mark Carwardine, 1997 **Sleepy and Busy Animals** Mark Carwardine, 1997 **Sleepy and Busy Animals** Barbara Behm, 1999 Contrasts the behavior of a variety of animals some of which are sleepy and some of which are busy including the mouse lemur water shrew and pine marten *Emotional Freedom Technique for Animals and Their Humans* Joan Ranquet, 2023-06-27 Energetically reprogram your animal's behavioral emotional and health patterns with EFT Explains the fundamentals of Emotional Freedom Technique EFT and how to apply it to animals Illustrates the tapping points for dogs cats and horses on separate maps Includes EFT tapping sequences for dogs cats and horses for emotional and behavioral challenges relationship enhancement wellness and end of life care Who has not experienced a dog who just won't stop barking or a cat that seems to strike out without apparent reason Relief might be at hand with the simple yet effective point tapping practices of the Emotional Freedom Technique EFT that provide an excellent hands on tool for treating behavioral emotional and health challenges in animals In this practical guide expert animal communicator and healer Joan Ranquet shows how to apply this energetic bodywork method on animals such as dogs cats or horses As you tap on certain acupressure points with a specific intention in mind the animal will experience energetic release on the levels of mind body emotions and spirit For easy access you will find maps clearly illustrating the specific EFT acupressure points on dogs cats and horses in addition Joan provides sample point sequences and intention scripts geared to specific ailments conditions and behavioral challenges as well as end of life care Targeted to work with and relieve difficult emotions the points used in EFT sequences each have a feel good aspect to them either a calming or releasing effect and the scripts work to help break up old behavioral or emotional patterning Presenting a way to cut straight to the energetic source of the problems the animal experiences and provide relief even if you don't know the cause of their pain this guide will help you not only become closer to your animal companions but also improve their well being as well as your own *Quick and Slow Animals* Barbara Behm, 1999 Introduces ten animals that can be distinguished by how fast they move including the sea lion sloth kiwi slow loris gibbon manatee springhare snail cheetah and tortoise *Adaptations in the Animal Kingdom* Verne A. Simon, 2010-03-11 Chapter 1 Temperature Regulation in Animals There are broadly speaking two kinds of animals with regard to body temperature exothermic cold blooded and endothermic warm blooded animals The exothermic animals such as reptiles do not supply body heat by metabolic conversion of food to heat Reptiles allow their surroundings to determine their body temperature They lie out in the sun to warm their body If they are too hot they seek the shade or even burrow into the ground At night they hide from the cold in burrows or squeeze into cracks between rocks or hide in leaf cover Reptiles avoid the extremes of temperature When reptiles become cool their movements slow down and chemical processes in their bodies such as digestion are inhibited Predators such as hawks and eagles find it easier to prey on lizards and snakes in cooler weather The distribution of reptiles is somewhat limited by their exothermic character They do not thrive in cold

climates¹ What are the advantages and disadvantages in being exothermic When the lizard is in a cool environment and cannot find a warmer spot its body simply cools to the temperature of the surroundings It is not necessary for the exothermic lizard to generate heat to increase its body temperature This means that the lizard uses less energy and does not have to eat as much As the lizard cools its digestion breathing rate and heart rate slow saving energy A disadvantage occurs when the cool lizard is attacked by a predator If warm he could run fast and have a much better chance of 1 St Patrick did not chase the snakes out of Ireland Ireland was already completely free of snakes St Patrick was instrumental in converting pagans to Christianity Since the snake was a symbol used in pagan rituals St Patrick was influential in ridding Ireland of the ritual use of symbolic snakes 10 Verne A Simon evading capture A warm lizard being chased by a predator can move quite fast for a short distance but like other exotherms lacks endurance and soon tires When the exotherm is running fast its effort is anaerobic that is is not using oxygen and lactic acid is building up in its body It soon tires and is unable to exert itself It must recover by taking in oxygen to rid the body of lactic acid Another disadvantage of exothermic life is that cold climates are not available as habitat If there is a sudden climate change an exothermic animal wouldn't be able to mount the sustained effort needed to migrate to a better environment The exothermic creature might simply perish About 180 million years ago mammals appeared Mammals are endothermic warm blooded and are able to maintain a nearly constant body temperature regardless of the temperature of their surroundings within wide limits Their bodies will not tolerate too high or too low a temperature If the surroundings are too hot or cold causing the body temperature to exceed allowed limits the animal will die Mammals have furry coats to help them tolerate low temperatures Sea dwelling mammals whales seals and walrus have thick layers of blubber for insulation Birds are endothermic and have feathers to protect them from the cold Many types of birds and mammals survive in cold climates Emperor penguins even live in the Antarctic in the coldest climate on earth Under normal circumstances mammals and birds manage to keep this very nearly constant body temperature regardless of the temperature of their surroundings Mammals are characterized by having body hair and suckling their young This latter behavior gives the class its name mammals must have mammary glands A second advantage is that endothermic animals are not limited to activity only in daylight hours In many local
