life and you've developed a set of tools to help you deal with stress you're not only eating better but you're also exercising better and feeling better. The beauty of this program is that none of these action steps is remotely intimidating because they're not a full immersion into a totally new lifestyle. Instead, it's a series of incremental changes removing bad habits one by one while at the same time adding good ones. There's nothing to scare you off; on the contrary, here's a whole book full of small changes that produce big results.

Written in a style and at a level which is relevant and accessible to the practising clinician and also to students, it provides a wealth of clinically valuable information on how the psychology of pain may be utilized in clinical practice. Addresses the common clinical problems relating to the psychological aspects of pain management and gives practical guidance based on the latest research as to how those problems should be dealt with. A model is provided to help readers grasp the main points as well as to help organize possible applications. The second part of the book is exclusively dedicated to incorporating the psychology of pain into clinical practice. Rather than starting with rehabilitating those with chronic pain, this book provides clinical application from the beginning. Thus the book examines why patients seek care in the first place as well as how to communicate with patients. Practical routines are provided for dealing with patients from the first visit and onwards. Special emphasis is placed on utilizing the information for early detection and secondary preventive interventions that will prevent the development of chronic pain problems. The book includes an appendix which may be used as a session manual by therapists using cognitive behavioural therapy with groups for early intervention in pain management. May be used as a textbook as well as a clinical reference. Volume 16 in an established series conceived and commissioned by Sir Patrick Wall. Written by probably the best known figure in the field of the psychological management of pain. Clinically relevant and research based. Written by a leading researcher who is also a practitioner and understands the problems and concerns of clinicians.
