Sleep And Dreaming Origins Nature And Functions:

Sleep & Dreaming D. Cohen, 2013-10-22 Sleep and dreaming are manifestations in higher organisms of a fundamental circadian rhythm of inactivity activity During the past thirty years research has provided a great deal of new information about the phenomenon and phenomenology of sleep and the relationship between sleep and wakefulness This book aims to describe organise and interpret some of this new knowledge in order to stimulate a greater appreciation of the role of sleep and dreaming in human adaptation The study of sleep and dreaming provides a very special perspective on human functioning It stands in direct contrast to more traditional paradigms utilised in psychology that place the locus of explanation of human behaviour in the external environment The Neuropsychology of Sleep and Dreaming John S.

Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology *Sleep and Dreaming: Origins, Nature and Functions* David B. Cohen, 1986

Harris, 2009-06-15 From the Iliad to Aristophanes from the gospel of Matthew to Augustine Greek and Latin texts are constellated with images of dreams This cultural history draws on contemporary post Freudian science and careful critiques of the ancient texts Harris reminds us of specificities contexts and changing attitudes through history *Conscious Mind, Sleeping Brain* J. Gackenbach, S. LaBarge, 2012-12-06 A conscious mind in a sleeping brain the title of this book provides a vivid image of the phenomenon of lucid dreaming in which dreamers are consciously aware that they are dreaming while they seem to be soundly asleep Lucid dreamers could be said to be awake to their inner worlds while they are asleep to the external world Of the many questions that this singular phenomenon may raise two are foremost What is consciousness And what is sleep Although we cannot provide complete answers to either question here we can at least explain the sense in which we are using the two terms We say lucid dreamers are conscious because their subjective reports and behavior

indicate that they are explicitly aware of the fact that they are asleep and dreaming in other words they are reflectively conscious of themselves We say lucid dreamers are asleep primarily because they are not in sensory contact with the external world and also because research shows physiological signs of what is conventionally considered REM sleep The evidence presented in this book preliminary as it is still ought to make it clear that lucid dreaming is an experiential and physiological reality Whether we should consider it a paradoxical form of sleep or a paradoxical form of waking or something else entirely it seems too early to tell

Neurocognitive Theory of Dreaming G. William Domhoff, 2022-10-04 A comprehensive neurocognitive theory of dreaming based on the theories methodologies and findings of cognitive neuroscience and the psychological sciences G William Domhoff s neurocognitive theory of dreaming is the only theory of dreaming that makes full use of the new neuroimaging findings on all forms of spontaneous thought and shows how well they explain the results of rigorous quantitative studies of dream content Domhoff identifies five separate issues neural substrates cognitive processes the psychological meaning of dream content evolutionarily adaptive functions and historically invented cultural uses and then explores how they are intertwined He also discusses the degree to which there is symbolism in dreams the development of dreaming in children and

the relative frequency of emotions in the dreams of children and adults During dreaming the neural substrates that support waking sensory input task oriented thinking and movement are relatively deactivated Domhoff presents the conditions that have to be fulfilled before dreaming can occur spontaneously He describes the specific cognitive processes supported by the neural substrate of dreaming and then looks at dream reports of research participants The why of dreaming he says may be the most counterintuitive outcome of empirical dream research Though the question is usually framed in terms of adaptation there is no positive evidence for an adaptive theory of dreaming Research by anthropologists historians and comparative religion scholars however suggests that dreaming has psychological and cultural uses with the most important of these found in religious ceremonies and healing practices Finally he offers suggestions for how future dream studies might take advantage of new technologies including smart phones

Sex and Behavior McGill, 2013-06-29 Discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive the need is usually to cross them not to emphasize them And any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd While there may be differences in outlook no boundaries exist But when Frank Beach started in research that was not the case Comparative psychology flourished in the United States whereas ethology was unknown Beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist Yet among the comparative psychologists of his generation he has had closer links with the initially European ethologists than almost any other He was indeed one of the editors of the first volume of *Behaviour* That this should have been so is not surprising once one knows that his Ph D thesis concerned *The Neural Basis for Innate Behavior* that he used to sleep in the laboratory so that he could watch mother rats giving birth and that in 1935 he was using model young to analyze maternal behavior Furthermore for nine years he worked in the American Museum of Natural History in a department first named Experimental Biology and later when Beach had saved it from extinction and become its chairman the Department of Animal Behavior It was in 1938 during Frank's time at the American Museum that he was first introduced to Niko Tinbergen by Ernst Mayr
