**Groovy Science** David Kaiser, W. Patrick McCray, 2016-05-31 Did the Woodstock generation reject science or re create it An enthralling study of a unique period in scientific history New Scientist Our general image of the youth of the late 1960s and early 1970s is one of hostility to things like missiles and mainframes and plastics and an enthusiasm for alternative spirituality and getting back to nature But this enlightening collection reveals that the stereotype is overly simplistic In fact there were diverse ways in which the era s countercultures expressed enthusiasm for and involved themselves in science of a certain type Boomers and hippies sought a science that was both small scale and big picture as exemplified by the annual workshops on quantum physics at the Esalen Institute in Big Sur or Timothy Leary s championing of space exploration as the ultimate high Groovy Science explores the experimentation and eclecticism that

marked countercultural science and technology during one of the most colorful periods of American history Demonstrate s that people and groups strongly ensconced in the counterculture also embraced science albeit in untraditional and creative ways Science Each essay is a case history on how the hippies repurposed science and made it cool For the academic historian Groovy Science establishes the deep mark on American culture made by the countercultural innovators For the non historian the book reads as if it were infected by the hippies democratic intent no jargon few convoluted sentences clear arguments and a sense of delight Nature In the late 1960s and 1970s the mind expanding modus operandi of the counterculture spread into the realm of science and sh t got wonderfully weird Neurophysiologist John Lilly tried to talk with dolphins Physicist Peter Phillips launched a parapsychology lab at Washington University Princeton physicist Gerard O Neill became an evangelist for space colonies Groovy Science is a new book of essays about this heady time Boing Boing At Home in the World Eilon Schwartz,2010-07-02 Challenging conventional understanding of humans as selfish and competitive at their core At Home in the World asserts that we have evolved as a profoundly social species biologically related to the rest of the natural world and at home on the only planet for which we are adapted to live Eilon Schwartz traces the history of Darwinism examining attempts of the nineteenth and twentieth centuries to apply Darwin s theories to educational philosophy and analyzing trends since the reemergence of Darwinism toward the end of the twentieth century Identifying with the Darwinian interpretations of Peter Kropotkin John Dewey and Mary Midgley Schwartz argues for a compelling educational philosophy rooted in our best scientific understandings of human nature **Encyclopedia of Early Modern Philosophy and the Sciences** Dana Jalobeanu,Charles T. Wolfe,2022-08-27 This Encyclopedia offers a fresh integrated and creative perspective on the formation and foundations of philosophy and science in European modernity Combining careful contextual reconstruction with arguments from traditional philosophy the book examines methodological dimensions breaks down traditional oppositions such as rationalism vs empiricism calls attention to gender issues to insiders and outsiders minor figures in philosophy and underground movements among many other topics In addition and in line with important recent transformations in the fields of history of science and early modern philosophy the volume recognizes the specificity and significance of early modern science and discusses important developments including issues of historiography such as historical epistemology the interplay between the material culture and modes of knowledge expert knowledge and craft knowledge This book stands at the crossroads of different disciplines and combines their approaches particularly the history of science the history of philosophy contemporary philosophy of science and intellectual and cultural history It brings together over 100 philosophers historians of science historians of mathematics and medicine offering a comprehensive view of early modern philosophy and the sciences It combines and discusses recent results from two very active fields early modern philosophy and the history of early modern science Editorial Board EDITORS IN CHIEF Dana Jalobeanu University of Bucharest Romania Charles T Wolfe Ghent University Belgium ASSOCIATE EDITORS Delphine Bellis University Nijmegen

**The World in a Crucible** Sally Newcomb, 2009-01-01 Geology coalesced as a discipline in the early part of the nineteenth century with the coming together of many strands of investigation and thought The theme of experimentation and or instrument aided observation is absent from most recent accounts of that time which rely on an admixture of theory and field observations informed by close examination of minerals James Hutton emerged as the person who had it right with suggestion of a central heat source for Earth while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief as opposed to sober application of observed facts However despite several claims that Hutton had won the day primary literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton derided information derived from looking into a little crucible This Special Paper makes the case that it was just those parameters of heat pressure solution and composition discovered in the laboratory that prevented resolution of the overriding questions about rock origin

**Science Policies and Twentieth-Century Dictatorships** Amparo Gómez, Antonio Fco. Canales, Brian Balmer, 2016-03-03 Making a fresh contribution to the political history of science this book explores the connections between the science policies of three countries that each experienced considerable political upheaval in the twentieth century Spain Italy and Argentina By focussing on these three countries the contributors are able to present case studies that highlight the characteristics and specificities of the democratic and dictatorial political processes involved in the production of science and technology The focus on dictatorship presents the opportunity to expand our knowledge beyond the more extensive literature about science in Nazi Germany and Stalinist USSR about the level of political involvement of scientists in non democratic contexts and to what extent they act as politicians in different contexts Key topics covered include the new forms of organization and institutionalization of science in the twentieth century the

involvement of scientific communities in the governance of science and its institutions the role of ideology in scientific development the scientific practices adopted by scientific communities in different contexts and the characteristics of science and technology produced in these contexts      **Learning and Teaching Primary Science** Angela Fitzgerald,2013-05-20 Learning and Teaching Primary Science brings primary science to life through the stories and experiences of pre service and practising teachers It explores the roles of the teacher and the learner of science and examines major issues and challenges including engaging diverse learners utilising technology assessment and reporting language and representation and integration in the crowded curriculum Each chapter contains examples activities and reflective questions to help readers create relevant and meaningful lesson plans Dedicated chapters for the areas of chemistry physics biology and earth and environmental science will give confidence to those without a science background Practical strategies and skills are underpinned by relevant theories and evidence based research Written by experts from Australia and New Zealand Learning and Teaching Primary Science is an essential resource for those beginning their journey of teaching science in the primary school classroom      **The Religion of Geology and Its Connected Sciences** Edward Hitchcock,2019-12-12 In The Religion of Geology and Its Connected Sciences Edward Hitchcock presents a profound exploration of the intersection between geological sciences and religious thought The book combines meticulous scientific inquiry with philosophical introspection as Hitchcock addresses how geological findings can coexist with the theological views of the time His literary style is characterized by a systematic approach employing clear erudite prose that invites a broad readership to engage with complex ideas Set against the backdrop of 19th century America a period marked by significant scientific advancement and theological debate Hitchcock s work serves as a crucial dialogue between science and faith asserting that geological evidence can enhance rather than threaten religious belief Edward Hitchcock a prominent geologist and paleontologist was deeply influenced by both his scientific background and his commitment to spirituality As a professor and the president of Amherst College Hitchcock was at the forefront of geological research during a time when the theory of evolution and the age of the Earth were hotly debated topics His dual passions for nature and theology informed his views leading him to seek harmony between what science reveals and the spiritual truths upheld by religion Highly recommended for scholars and general readers alike this book is essential for anyone interested in the dialogue between science and religion Hitchcock s nuanced perspective not only sheds light on the geological sciences but also offers a compelling discussion on the implications of those findings for faith Readers will find themselves enriched and challenged by Hitchcock s earnest endeavor to bridge these seemingly disparate realms      *International Relations Theory* Mykola Kapitonenko,2022-03-08 This textbook shows how to think about international relations and offers insights into its most important theories and issues Written from beyond the Anglo US academic environment with attention to regional nuances it teaches students to perceive international politics in an organized and theoretical way thus helping them grasp the complexity of the subject and see simple ways of

making sense of it Providing a thorough introduction to the main theories and approaches to international relations the book covers the main dilemmas concepts and methodological issues alongside a number of neglected theoretical paradigms such as institutionalism Marxism critical approaches feminism and power in world politics It will be of great use as a main textbook as well as a supplementary guide for related courses including Foreign Policy Analysis Conflict Studies Security Studies History of International Relations International Organizations and Global Governance

**Loving and Hating the World** James Lawson, 2021-12-29 What is it that makes discipleship authentic Discipleship involves learning how to be in the world but not of the world The first Christians were ambivalent about the world God so loved the world that he gave his only begotten son but friendship with the world is enmity with God So discipleship involves learning how to live with this ambivalence and an ancient tension between loving and hating the world This book offers a deeper understanding of what discipleship means by tracing the history of this ambivalence from the New Testament to the present It presents a revisionary account of this history as a continuing and nonnegotiable tension between loving and hating the world rather than a simple transition from medieval world denial to modern world affirmation It argues that this tension helped produce our own secular age and it considers modern Jewish and Christian philosophical and theological responses to this history that suggest ways that Christians can negotiate this tension to be more authentic disciples today

*Missiological Triage* Sarah Lunsford, 2023-10-06 Most of what we do in missions can be categorized as our missiological methods As important as our mission methods are we usually look to the social sciences to guide us as we seek to find effective and reproducible methods for sharing the gospel and planting churches cross culturally The lack of theological reflection on our missiological methods bears consequences We tend to look to Scripture and theology for our missiological purpose and goals but we often struggle to know how theology speaks to the social sciences or to our pragmatic methods The social sciences have contributed to undeniable advances in our methodologies At the same time we want our methods to be anchored in our theology and the fruit of our missional efforts to be theologically healthy *Missiological Triage* provides a solid foundation for a holistic integration of theology missiology and the social sciences and offers practical steps for applying the social sciences to our mission methods in a theologically faithful manner Professors and students of missiology mission leaders and missionary practitioners will benefit from this framework for theologically analyzing the social sciences in our missiological methods

**Singular Images, Failed Copies** Vered Maimon, 2015-10-25 Focusing on early nineteenth century England and on the works and texts of the inventor of paper photography William Henry Fox Talbot *Singular Images Failed Copies* historicizes the conceptualization of photography in that era as part of a major historical change Treating photography not merely as a medium or a system of representation but also as an epistemology Vered Maimon challenges today's prevalent association of the early photograph with the camera obscura Instead she points to material formal and conceptual differences between those two types of images by considering the philosophical and aesthetic premises linked with early photography Through

this analysis she argues that the emphasis in Talbot's accounts on the removal of the artist's hand in favor of the pencil of nature did not mark a shift from manual to mechanical and more accurate or objective systems of representation. In *Singular Images Failed Copies* Maimon shows that the perception of the photographic image in the 1830s and 1840s was in fact symptomatic of a crisis in the epistemological framework that had informed philosophical scientific and aesthetic thought for two centuries.

**Prophet for a Dark Age** Graham Rooth, 2008-03-14 Rene Guenon is a major figure for anyone who recognises a need to rediscover the spiritual roots from which Western society has become so comprehensively alienated. Immersing himself in the search for spiritual truth he chose Islam as the vehicle for his spiritual life. Science and Power in the Nineteenth-Century Tasman World Alexandra Roginski, 2023-06-01 The contentious science of phrenology once promised insight into character and intellect through external reading of the head. In the transforming settler colonial landscapes of nineteenth century Australia and Aotearoa New Zealand popular phrenologists figures who often hailed from the margins performed their science of touch and cranial jargon everywhere from mechanics institutions to public houses. In this compelling work Alexandra Roginski recounts a history of this everyday practice exploring how it featured in the fates of people living in and moving through the Tasman World. Innovatively drawing on historical newspapers and a network of archives she traces the careers of a diverse range of popular phrenologists and those they encountered. By analysing the actions at play in scientific episodes through ethnographic social and cultural history Roginski considers how this now discredited science could in its own day yield fleeting power and advantage even against a backdrop of large scale dispossession and social brittleness.
