The Hawaiian Spinner Dolphin Kenneth S. Norris, Bernd Wursig, Randall S. Wells, Melany Wursig, 1994-08-30 Twenty years in the making by a distinguished dolphin expert and his associates The Hawaiian Spinner Dolphin is the first comprehensive scientific natural history of a dolphin species ever written From their research camp at Kealahou Bay in Hawaii these scientists followed a population of wild spinner dolphins by radiotracking their movements and with the use of a windowed underwater vessel observing the details of their underwater social life The authors begin with a description of the spinner dolphin species its morphology and systematics and then examine the ocean environment the organization of dolphin populations and the way this school based society of mammals uses shorelines for rest and instruction of the young The dolphins reproductive cycle their vision vocalization hearing breathing and feeding and the integration of the school are carefully analyzed The authors conclude with a comprehensive evolutionary analysis of this marine cultural system with its behavioral flexibility and high levels of cooperation This absorbing book is the richest source available of new scientific insights about the lives of wild dolphins and how their societies evolved at sea [Our Dolphin Ancestors](#) Frank Joseph, 2016-03-17 Reveals the shared ancestry behind our affinity with dolphins and our shared destiny Explains how we are both descendants of the aquatic ape and still share many physiological features with dolphins that set us apart from other primates Explores dolphins communication with other species and how dolphin therapy has miraculous effects on people with autism cancer stroke and depression Explores the connections between dolphins and Atlantis and Lemuria Wild animals avoid contact with humans but wild dolphins seek us out to play and socialize even going so far as to voluntarily rescue people from drowning What explains this remarkable natural affinity Revealing the evolutionary basis for our special relationship with dolphins Frank Joseph explains how we are both descendants of the same ancient branch of human ity Building upon the aquatic ape theory he details how we both began on land but devastating floods forced our distant ancestors into the seas where humanity developed many of the traits that set us apart from other primates such as our instinctive diving reflex and our newborns ability to swim But while some of the aquatic apes returned to land later evolving into modern humans some remained in the cradle of Mother Ocean and became our dolphin cousins Integrating scientific research on dolphin intelligence communication and physiology with enduring myths from some of the world s oldest cultures such as the Aborigines Norse Greeks and Celts the author examines our physical commonalities with dolphins including their vestigial thumbs and legs birth processes and body temperature He explores dolphins uncanny ability to diagnose disease such as cancer in humans and how dolphin therapy has had miraculous effects on children with autism victims of stroke and those suffering from depression He provides evidence for dolphins different attitudes toward men women and children their natural affinity with cats and dogs and their telepathic communication with other species including ours He explores dolphins mysterious role in the birth of early civilization and their connections with the Dog Star Sirius and Atlantis and Lemuria a

Shivik,2017-11-07 An eye opening celebration of the unique personalities found within the animal kingdom and of the special links between us and our non human friends Blending cutting edge science with personal anecdotes a wildlife expert explores the mysteries of animal behavior in this thoroughly enjoyable and informative read for animal and nature lovers

Booklist Why are some cats outgoing and others standoffish Why are some dogs adventuresome and others homebodies As any pet owner can attest we feel that the animals we ve formed bonds with are unique as particular and peculiar as any friend or loved one But is there any scientific basis for this feeling or are we just projecting our complicated human ideas onto the animal world It turns out that science has been reluctant to even broach the subject of individuality in the animal kingdom But now a fundamental shift in scientific understanding is underway as mainstream scientists begin to accept the notion that animals of all kinds from apes and birds to crabs and spiders do indeed have individual personalities In Mousy Cats and Sheepish Coyotes veteran wildlife expert Dr John Shivik brings us stories from the frontlines of this exciting new research Researchers are finding that each wolf bear and coyote has a different tendency to follow its predatory nature or to shyly avoid conflicts Some bluebirds are lovers others are fighters Some water striders are passive others bellicose Unique personalities can be discovered in every corner of the animal kingdom Even microscopic organisms can exhibit unique tendencies The array of personality types among all species is only beginning to be described and understood As Shivik argues individuality in animals is important not only for the human animal bond but also for evolution adaption and species diversity in the wild *The Lives of Hawai'i's Dolphins and Whales* Robin W. Baird,2016-11-30 Ocean currents winds and rainfall all work together to create a marine oasis around the Hawaiian Islands providing a home for many species of dolphins and whales normally found in the deep oceans of the world The Lives of Hawai i s Dolphins and Whales opens a window into the world of these mysterious creatures with stories and observations from author Robin W Baird s work over
