

The Power Machine

JG Myers

The Power Machine:

The Power of the Machine Alf Hornborg, 2001-10-16 Hornborg argues that we are caught in a collective illusion about the nature of modern technology that prevents us from imagining solutions to our economic and environmental crises other than technocratic fixes He demonstrates how the power of the machine generates increasingly asymmetrical exchanges and distribution of resources and risks between distant populations and ecosystems and thus an increasingly polarized world order The author challenges us to reconceptualize the machine industrial technomass as a species of power and a problem of culture He shows how economic anthropology has the tools to deconstruct the concepts of production money capital and market exchange and to analyze capital accumulation as a problem at the very interface of the natural and social sciences His analysis provides an alternative understanding of economic growth and technological development Hornborg's work is essential for researchers in anthropology human ecology economics political economy world systems theory environmental justice and science and technology studies Find out more about the author at the Lund University Sweden web site
