**Report**, 1957 Cybersecurity Governance in Latin America Carlos Solar, 2023-01-01 Cybersecurity Governance in Latin America discusses how the massification of the Internet has exposed emerging democracies high tech vulnerabilities to cyber attacks and questions why states have decided to introduce policies and legislation facilitating the militarization of cyberspace Carlos Solar offers a comparative analysis using the cases of Argentina Brazil Chile Colombia Mexico and Venezuela to help navigate the changing security landscape and the growing risks found in the digital domain His analysis includes a review of civilian and military preparedness emphasizing the ongoing alliances with the world's superpowers to finally debate what are the side effects for peace and development in the Americas from the current cybersecurity rivalry between the United States and China Providing a much needed account of state technology affairs in the global south Cybersecurity Governance in Latin America challenges scholars and policymakers to rethink the protection of cyberspace to avoid unnecessarily sacrificing rights and freedoms in the name of national security

*Team Performance Assessment and Measurement* Michael T. Brannick, Eduardo Salas, Carolyn W. Prince, 1997-06-01 This book began at a conference on team performance measurement held at the University of South Florida Several participants at the conference felt that a book on team performance measurement would be of interest to a broader audience and they began looking for authors in diverse disciplines Some of the chapters in this book closely follow material presented at the conference Many others report work that was done subsequently or was done by authors not present at the conference The result is a book rich in its diversity of approaches to measurement and which contains illustrations of many different teams This book is the first of its kind to bring together a collection of scholars and practitioners focusing solely on the problem of team performance measurement Although much has been written about team and group effectiveness little theoretical and empirical progress has been made in the measurement of team processes and outcomes The book represents a major step forward both theoretically and empirically Section 1 provides a rich theoretical basis for measurement including designing measures to be used in team training measures of

shared mental models and measures of team workload Section 2 addresses methodological developments and issues including the design and validation of simulations surveys and observer checklists It also deals with issues such as the consistency of team performance and task and level of analysis issues Section 3 provides applications and illustrations of team performance measures in such teams as nuclear power control room operators theater technical crews and aircraft cockpit crews Section 4 offers guidance for anyone interested in developing their own measures of team performance There are both theoretical and practical reasons for the current interest in teams Psychological research interest in groups and teams has returned and is now a thriving area Self managed work groups and semi autonomous work groups have become increasingly common in industry so there is an increased interest in team functioning from a practical standpoint This volume's purpose is to describe recent advances in the measurement of team performance both process and outcome Several of the chapters provide recommendations on how when and why to measure aspects of teams In addition to describing what is currently known the book also discusses what remains to be known and what needs to be done next The book is intended primarily for those interested in research about team processes and outcomes researchers and academics who possess a basic understanding of statistics and psychometrics The bulk of research reported has applied aims which provide much practical information such as how to design simulations rating forms and dimensions of team performance useful for feedback to many kinds of teams In addition there are examples from several different kinds of teams including aircrews nuclear power plant operators hospital workers ship combat information center groups and theater technicians Therefore the book should be useful to people who want to design measures to evaluate teams
