Galaxy Stuart Clark, Stuart G. Clark, 2008-01-01 With Stuart Clark's lucid text and nearly 500 cutting edge images GALAXY investigates every aspect of the Milky Way from its place in the Universe to its large scale anatomy from its history to its future We approach the Milky Way from the very edge of the Universe threading our way through massive conglomerations of galaxies gathered like grains of dust on a veil of cobwebs Out here we can survey the thriving diversity of galaxy types and galactic life Homing in on our destination we skirt fleets of satellite galaxies orbiting our Galaxy like the Moon orbits the Earth before plunging through the Milky Way's spiral arms on a course that will ultimately lead us to its dark heart a gravitational maelstrom of white dwarfs neutron stars and hypergiants all in the thrall of a supermassive black hole As we tour the Galaxy the rhythms of stellar life unfold before our eyes we pass through dark clouds of dust and gas incubating clusters of embryonic stars we discover spectacular emission nebulae blazing in the fierce radiation of stellar newborns we watch dying stars bloom and fade as planetary nebulae or tear themselves apart as supernovae and we survey the planets and moons of our Solar System

The Milky Way Gregory Vogt, 2010-01-01 Presents an introduction to the Milky Way galaxy describing the different types of bodies found there the movements found within it and the position of the solar system in the galaxy

The Milky Way William H. Waller, 2017-10-31 A grand tour of our dynamic home galaxy This book offers an intimate guide to the Milky Way taking readers on a grand tour of our home Galaxy's structure genesis and evolution based on the latest astronomical findings In engaging language it tells how the Milky Way congealed from blobs of gas and dark matter into a spinning starry abode brimming with diverse planetary systems some of which may be hosting myriad life forms and perhaps even other technologically communicative species William Waller vividly describes the Milky Way as it appears in the night sky acquainting readers with its key components and telling the history of our changing galactic perceptions The ancients believed the Milky Way was a home for the gods Today we know it is but one galaxy among billions of others in the observable universe Within the Milky Way ground based and space borne telescopes have revealed that our Solar System is not alone Hundreds of other planetary systems share our tiny part of the vast Galaxy We reside within a galactic ecosystem that is driven by the theatrics of the most massive stars as they blaze through their brilliant lives and dramatic deaths Similarly effervescent ecosystems of hot young stars and fluorescing nebulae delineate the graceful spiral arms in our Galaxy's swirling disk Beyond the disk the spheroidal halo hosts the ponderous and still mysterious dark matter that outweighs everything else Another dark mystery lurks deep in the heart of the Milky Way where a supermassive black hole has produced bizarre phenomena seen at multiple wavelengths Waller makes the case that our very existence is inextricably linked to the Galaxy that spawned us Through this book readers can become well informed

Habing, 2019-03-23 This richly illustrated book discusses the ways in which astronomy expanded after 1945 from a modest discipline to a robust and modern science It begins with an introduction to the state of astronomy in 1945 before recounting how in the following years initial observations were made in hitherto unexplored ranges of wavelengths such as X radiation infrared radiation and radio waves These led to the serendipitous discovery of more than a dozen new phenomena including quasars and neutron stars that each triggered a new area of research The book goes on to discuss how after 1985 the further systematic exploration of the earlier discoveries led to long term planning and the construction of new large telescopes on Earth and in Space Key scientific highlights described in the text are the detection of exoplanets 1995 the unexpected discovery of the accelerated expansion of the Universe 1999 a generally accepted model for the large scale properties of the Universe 2003 and the CDM theory 2005 that explains how the galaxies and stars of the

present Universe were formed from minute irregularities in the almost homogenous gas that filled the early Universe All these major scientific achievements came at a price namely the need to introduce two new phenomena that are as yet unexplained by physics inflation and dark energy Probably the deepest unsolved question has to be Why did all of this start with a Big Bang
