Flanagan, Keith Grimwade, 2025-08-15 Uncovers the historical significance of water milling along the River Great Ouse using innovative methods revealing its national prominence and lasting landscape impact The River Great Ouse in Cambridgeshire has a long history of watermilling stretching back to at least the 10th century and possibly to the Roman period The authors use remote sensing LiDAR cartographic analysis fieldwork documents especially contemporary litigation and literary sources to reveal new findings about this fascinating landscape The Great Ouse s watermills were recorded as the most valuable in England in the Domesday Survey All their sites are located several having been long lost and a comprehensive explanation for their national pre eminence is given The expansion of activity in the Middle Ages is investigated through a detailed study of the disputes arising from the competing uses of the river and its floodplain for watermilling navigation and farming Channel features that hitherto have either been ignored or attributed to natural processes are shown to be the result of milling activity The continuing impact of watermilling on the landscape until its decline in the second half of the 19th century is analysed The authors findings have broader implications for the understanding of the development of watermilling in lowland river landscapes the evolution of parish boundaries and the development of multi channel river forms They conclude by advocating a mapping methodology that designates landscape features resulting from watermilling as heritage assets to guide planning decisions **The Routledge Handbook of Medieval Rural Life** Miriam Müller, 2021-10-26 The Routledge

The English Woollen Industry, c.1200-c.1560 John Oldland, 2019-01-15 This is the first book to describe the early English woollens industry and its dominance of the trade in quality cloth across Europe by the mid sixteenth century as English trade was transformed from dependence on wool to value added woollen cloth It compares English and continental draperies weighs the advantages of urban and rural production and

examines both quality and coarse cloths Rural clothiers who made broadcloth to a consistent high quality at relatively low cost Merchant Adventurers who enjoyed a trade monopoly with the Low Countries and Antwerp s artisans who finished cloth to customers needs all eventually combined to make English woollens unbeatable on the continent Islands and Military Orders, c.1291-c.1798 Emanuel Buttigieg, Simon Phillips, 2016-05-06 At the heart of this volume is a concern with exploring levels of interaction between two particular objects of study islands on the one hand and military orders on the other According to Fernand Braudel islands are often brutally caught between the two opposite poles of archaism and innovation What happened when these particular environments interacted with the Military Orders The various contributions in this volume address this question from a variety of angles 1291 was a significant year for the main military orders uprooted from their foundations in the Holy Land they took refuge on Cyprus and in the following years found themselves vulnerable to those who questioned the validity of their continued existence The Teutonic Order negated this by successfully transferring their headquarters to Prussia the Knights Templar however faced suppression Meanwhile the Knights Hospitaller conquest of Rhodes assured both their survival and independence Islands are often by definition seen to be embodiments of insularity of an effort to be separate distinct cut off Military Orders are conversely international in scope nature and personnel the first international orders of the Church as they have often been described Therein lies the crux of the matter how did insular outposts and international institutions come together to forge distinct and often successful experiments Hospitaller Rhodes and Malta still impress with their magnificent architectural heritage but their success went beyond stone and mortar and the story of islands and military orders as will be clearly shown in this volume also goes beyond these two small islands The interaction between the two levels insulation and internationalisation and the interstices therein created spaces conducive to both dynamism and stability as military orders and islands adapted to each other s demands limitations and opportunities

At the Dawn of Modernity David Levine, 2001-02-19 Looking at a neglected period in the social history of modernization David Levine investigates the centuries that followed the year 1000 when a new kind of society emerged in Europe New commercial routines new forms of agriculture new methods of information technology and increased population

densities all played a role in the prolonged transition away from antiquity and toward modernity At the Dawn of Modernity highlights both top down and bottom up changes that characterized the social experience of early modernization In the former category are the Gregorian Reformation the imposition of feudalism and the development of centralizing state formations Of equal importance to Levine s portrait of the emerging social order are the bottom up demographic relations that structured everyday life because the making of the modern world in his view also began in the decisions made by countless men and women regarding their families and circumstances Levine ends his story with the cataclysm unleashed by the Black Death in 1348 which brought three centuries of growth to a grim end

Jordan, 1997-12-15 The horrors of the Great Famine 1315-1322 one of the severest catastrophes ever to strike northern Europe lived on for centuries in the minds of Europeans who recalled tales of widespread hunger class warfare epidemic disease frighteningly high mortality and unspeakable crimes Until now no one has offered a perspective of what daily life was actually like throughout the entire region devastated by this crisis nor has anyone probed far into its causes Here the distinguished historian William Jordan provides the first comprehensive inquiry into the Famine from Ireland to western Poland from Scandinavia to central France and western Germany He produces a rich cultural history of medieval community life drawing his evidence from such sources as meteorological and agricultural records accounts kept by monasteries providing for the needy and documentation of military campaigns Whereas there has been a tendency to describe the food shortages as a result of simply bad weather or else poor economic planning Jordan sets the stage so that we see the complex interplay of social and environmental factors that caused this particular disaster and allowed it to continue for so long Jordan begins with a description of medieval northern Europe at its demographic peak around 1300 by which time the region had achieved a sophisticated level of economic integration He then looks at problems that when combined with years of inundating rains and brutal winters gnawed away at economic stability From animal diseases and harvest failures to volatile prices class antagonism and distribution breakdowns brought on by constant war northern Europeans felt helplessly besieged by acts of an angry God although a cessation of war and a more equitable distribution of resources might have lessened the severity of the food shortages Throughout Jordan interweaves vivid historical detail with a sharp analysis of why certain responses to the famine failed He ultimately shows that while the northern European economy did recover quickly the Great Famine ushered in a period of social instability that had serious repercussions for generations to come
